

Modular Program Report

The following report(s) provides findings from an FDA-initiated query using its Mini-Sentinel pilot. While Mini-Sentinel queries may be undertaken to assess potential medical product safety risks, they may also be initiated for various other reasons. Some examples include determining a rate or count of an identified health outcome of interest, examining medical product use, exploring the feasibility of future, more detailed analyses within Mini-Sentinel, and seeking to better understand the capabilities of the Mini-Sentinel pilot.

Data obtained through Mini-Sentinel are intended to complement other types of evidence such as preclinical studies, clinical trials, postmarket studies, and adverse event reports, all of which are used by FDA to inform regulatory decisions regarding medical product safety. The information contained in this report is provided as part of FDA's commitment to place knowledge acquired from the Mini-Sentinel pilot in the public domain as soon as possible. Any public health actions taken by FDA regarding products involved in Mini-Sentinel queries will continue to be communicated through existing channels.

FDA wants to emphasize that the fact that FDA has initiated a query involving a medical product and is reporting findings related to that query does not mean that FDA is suggesting health care practitioners should change their prescribing practices for the medical product or that patients taking the medical product should stop using it. Patients who have questions about the use of an identified medical product should contact their health care practitioners.

The following report contains a description of the request, request specifications, and results from the modular program run(s).

Overview	
<u>Request Description</u>	<p>FDA has requested execution of Modular Program #9 (MP9), version 1.0, to investigate intravenous immunoglobulin (IVIG) procedure codes in the Mini-Sentinel Distributed Database. See Appendix A for a description of each code included in this request. This involved one run of MP9. The time window for the request is January 1, 2006 – December 31, 2012. The request was distributed to 18 Data Partners on July 29, 2013.</p> <p>Results provide counts of prevalent and incident IVIG patients, total claims, eligible members, and member-years. The request was run against the Mini-Sentinel Distributed Database (MSDD) for the time period of January 1, 2006 - December 31, 2012.</p>

Modular Program Specifications MSY4_MPR47_v1

Modular Program #9, version 1.0, was used to investigate prevalence and incidence of IVIG procedure codes. The query period was from January 1, 2006 to December 31, 2012, and the enrollment gap was set at 45 days. Age groups were split as follows: 0-21, 22-44, 45-64, and 65+ years. In total, 14 different scenarios were examined in this report with differing codes to define IVIG procedures. See below for a description of each of these scenarios. Please see Appendix A for a list of codes included in each incident exposure grouping.

Glossary of Terms in Modular Program 9*

Eligible Members (incidence-based cohort) - Number of members eligible for incident diagnosis (defined by the washout period) with medical coverage during the query period.

Eligible Members (prevalence-based cohort) - Number of members with at least one day of medical coverage during the query period.

Enrollment Gap - Number of days allowed between two consecutive enrollment periods without breaking a “continuously enrolled” sequence.

Incidence Type - *Minimum incidence type* will consider the first treatment episode in the query period as long as it is the first treatment episode in the user's entire available history. *Single* and *Multiple incidence types* will use the washout period to establish incidence, however *Single* will only consider the first treatment episode whereas *Multiple* will consider all qualifying incident treatment episodes.

Member-Years (incidence-based cohort) - Sum of all years of enrollment with medical coverage in the query period preceded by a washout period.

Member-Years (prevalence-based cohort) - Sum of all years members are enrolled with medical coverage during the query period.

New Patients - Number of members with incident diagnosis during the query period. Member must have no evidence of diagnosis of interest (defined by incidence criteria) in the prior washout period. A patient may only be counted once in a query period.

New Starts - Number of incident diagnoses during the query period. Patient must have no prior diagnoses in the washout period. For a minimum incidence type, an individual may have no more than one new start. For a multiple incidence type, an individual may have more than one new start.

Query Period - Period in which the modular program looks for diagnoses of interest.

Washout Period - Number of days a patient is required to have no evidence of prior diagnosis and continuous medical coverage.

*all terms may not be used in this report
