

Disclaimer

The following report(s) provides findings from an FDA-initiated query using Sentinel. While Sentinel queries may be undertaken to assess potential medical product safety risks, they may also be initiated for various other reasons. Some examples include determining a rate or count of an identified health outcome of interest, examining medical product use, exploring the feasibility of future, more detailed analyses within Sentinel, and seeking to better understand Sentinel capabilities.

Data obtained through Sentinel are intended to complement other types of evidence such as preclinical studies, clinical trials, postmarket studies, and adverse event reports, all of which are used by FDA to inform regulatory decisions regarding medical product safety. The information contained in this report is provided as part of FDA's commitment to place knowledge acquired from Sentinel in the public domain as soon as possible. Any public health actions taken by FDA regarding products involved in Sentinel queries will continue to be communicated through existing channels.

FDA wants to emphasize that the fact that FDA has initiated a query involving a medical product and is reporting findings related to that query does not mean that FDA is suggesting health care practitioners should change their prescribing practices for the medical product or that patients taking the medical product should stop using it. Patients who have questions about the use of an identified medical product should contact their health care practitioners.

The following report contains a description of the request, request specifications, and results from the modular program run(s).

Overview for Request: cder_pmp_wp003

Request ID: cder_pmp_wp003

Request Description: In this request we executed the PCORnet Modular Program (PMP) tool, version v2.1 to explore the use of PCORnet to conduct active safety surveillance of cannabis and cannabis-derived products, including cannabidiol.

Sentinel Routine Querying Module: PCORnet Modular Program (PMP) tool version 2.1 with Baseline Characteristics, Geographics and Comorbidity Modules.

Data Source: Data from 23 Sentinel/PCORnet DataMarts are included in this report. This request was distributed on August 24, 2022.

Study Design: This request identified individuals with a medication exposure for cannabis or cannabis-derived products, including cannabidiol, or a laboratory record for tetrahydrocannabinol (THC) in urine, within the PCORnet network between July 1, 2018 to July 1, 2022.

Health Events of Interest:

We defined the Health Events of Interest (HEI) as the first record of a medication exposure for cannabis or cannabis-derived products, including cannabidiol, or a laboratory record for THC in urine within the period of July 1, 2018 to July 1, 2022.

Cohort Eligibility Criteria: We required patients to have at least one encounter record within the query period of July 1, 2018 to July 1, 2022. This encounter may have occurred before, after, or on the date of the health event of interest. For cohorts requiring a diagnosis (during an encounter) in the year prior, this diagnosis would fulfill the cohort eligibility criteria. This query identifies patients of all ages with the following:

- CAN_ALL_DX:** Cannabis or cannabis-derived product (except Epidiolex) in medication record among patients with any diagnosis in the year prior*
- CAN_ALL:** Cannabis or cannabis-derived product (except Epidiolex) in medication record among all patients*
- CAN_APP_DX:** Epidiolex (brand) use reported in medication record among patients with any diagnosis in the year prior
- CAN_APP:** Epidiolex (brand) use reported in medication record among all patients
- CAN_CBD_DX:** Cannabidiol use, except Epidiolex (brand), reported in medication record, among patients with any diagnosis in the year prior*
- CAN_CBD:** Cannabidiol use, except Epidiolex (brand), reported in medication record, among all patients*
- THC_LAB_DX:** Laboratory record for THC in urine with either a positive, presumptive positive, or detected result OR a result that was >50 ng/ml among patients with any diagnosis in the year prior
- THC_LAB:** Laboratory record for THC in urine with either a positive, presumptive positive, or detected result OR a result that was >50 ng/ml among all patients

*can include Epidiolex reported at the cannabidiol ingredient level

Please see Appendix D.1 for a list of RxNorm Concept Unique Identifier (RXCU); Appendix D.2 for a list of generic and brand names of medical products used to define the health event of interest in this request; Appendix D.3 for a list of Logical Observation Identifiers Names and Codes (LOINC) used to define the health event of interest in this request; and Appendix E for a list of International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) and International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) diagnosis codes used to define inclusion events in this request.

Query specifications can be found in Appendix G.

Overview for Request: cder_pmp_wp003

Baseline Characteristics: We assessed the following characteristics:

• **Conditions of interest in the year prior, including index date (-365, 0 days)** : Behavioral and Emotional Disorders, Chronic Kidney Disease, Cardiovascular Disease, Epidiolex (Dravet, Lennox-Gastaut, and Tuberous Sclerosis Complex), Human Immunodeficiency Virus/Acquired Immunodeficiency Syndrome (HIV/AIDS), Irritable Bowel Syndrome, Psychosis or Psychotic Disorder, Rheumatologic and Inflammatory Conditions, Anorexia and Weight Loss, Anxiety Disorders, Cancer, Chronic Pain, Chronic Liver Disease, Diabetes, Glaucoma, Hypertension, Mood Disorders, Neurological conditions, Obesity, Epilepsies and Seizure Disorders, Personality Disorders, Pregnancy, Pulmonary Disease, Sleep Disorders, and Substance Use Disorders

• **Conditions of interest in the two days prior, including index date (-2, 0 days)** : Behavioral and Emotional Disorders, Chronic Kidney Disease, Cardiovascular Disease, Epidiolex (Dravet, Lennox-Gastaut, and Tuberous Sclerosis Complex), HIV/AIDS, Irritable Bowel Syndrome, Psychosis or Psychotic Disorder, Rheumatologic and Inflammatory Conditions, Anorexia and Weight Loss, Anxiety Disorders, Cancer, Chronic Pain, Chronic Liver Disease, Diabetes, Glaucoma, Hypertension, Mood Disorders, Neurological conditions, Obesity, Epilepsies and Seizure Disorders, Personality Disorders, Pregnancy, Pulmonary Disease, Sleep Disorders, and Substance Use Disorders

• **Conditions of Interest on the index date (0,0 days):** Any diagnosis in an Ambulatory (Ambulatory Visit [AV], Telehealth [TH], or Other Ambulatory Visit [OA]) Encounter, Any diagnosis in an Emergency (ED) Encounter, Any diagnosis in an Inpatient (Inpatient Hospital Stay [IP], Observational Stay [OS], or Emergency Department Admit to Inpatient Hospital Stay [EI]) Encounter, Pregnancy, Epidiolex, Cannabidiol except Epidiolex, Any cannabis or cannabis-derived product except Epidiolex, Qualitative THC Laboratory, and Quantitative THC Laboratory

• **Conditions of Interest in the 30 days prior to the index date (-30,-1 days):** Epidiolex, Cannabidiol except Epidiolex, Any cannabis or cannabis-derived product except Epidiolex, Qualitative THC Laboratory, and Quantitative THC Laboratory

• **Conditions of Interest in the 30 days after the index date (1, 30 days):** Epidiolex, Cannabidiol except Epidiolex, Any cannabis or cannabis-derived product except Epidiolex, Qualitative THC Laboratory, and Quantitative THC Laboratory

• **Conditions of Interest in the 365 days after the index date (1, 365 days):** Epidiolex, Cannabidiol except Epidiolex, Any cannabis or cannabis-derived product except Epidiolex, Qualitative THC Laboratory, and Quantitative THC Laboratory

• **Medications of interest in the 30 days before and after the index event (-30, 30 days)** : Anticoagulants, Anticonvulsants, Antidepressants, Antidiabetics, Antihistamines, Antihypertensives, Antipsychotics, Anxiolytics, central nervous system (CNS) Stimulants, Chemotherapies, Other Immunosuppressants, Opioids, Systemic Corticosteroids, Calcineurin or mTOR Inhibitors, Dronabinol, Nabilone, and Antiemetics

• **Health Care Utilization in the year prior (-365, -1 days):** At Least One Diagnosis Record in Any Care Setting, At Least One Diagnosis Record in Ambulatory (AV, TH, or OA) Care Setting, At Least One Diagnosis Record in Emergency (ED) Care Setting, At Least One Diagnosis Record in Inpatient (IP, OS, or EI) Care Setting, At Least Two Diagnosis Records in Any Care Setting, At Least Two Diagnosis Records in Ambulatory (AV, TH, or OA) Care Setting, At Least Two Diagnosis Records in Emergency (ED) Care Setting, At Least Two Diagnosis Records in Inpatient (IP, OS, or EI) Care Setting, At Least Six Diagnosis Records in Any Care Setting, At Least Six Diagnosis Records in Ambulatory (AV, TH, or OA) Care Setting, At Least Six Diagnosis Records in Emergency (ED) Care Setting, At Least Six Diagnosis Records in Inpatient (IP, OS, or EI) Care Setting, At Least One Prescribing Records, and At Least Six Prescribing Records

Please see Appendix F.1. for a list of Current Procedural Terminology (CPT), Healthcare Common Procedure Coding System, Level II (HCPCS), International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM), International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM), and International Classification of Diseases, Tenth Revision, Procedural Coding System (ICD-10-PCS) codes used to define baseline characteristics in this request; Appendix F.2. for a list of RxNorm Concept Unique Identifier (RXCU) used to define baseline characteristics in this request; and Appendix F.3 for a list of generic and brand names of medical products used to define baseline characteristics in this request.

We describe the distribution of patients within each cohort according to quartile of Area Deprivation Index associated with their home zip code.¹

The Crosswalk of Patient Home Zip Code to Area Deprivation Index (ADI) Quartile specifications can be found in Appendix B.

Overview for Request: cder_pmp_wp003

Charlson/Elixhauser Combined Comorbidity Score:

We assessed Charlson/Elixhauser Combined Comorbidity Score in the year prior to the Index Date (-365, -1 days).

The complete list of Comorbidity Codes and Weights Used to Calculate the Combined Comorbidity Score can be found in Appendix C.

Limitations: Algorithms to define health events of interest are imperfect and therefore might introduce misclassification. Therefore, data should be interpreted with this limitation in mind.

Electronic Health Record (EHR) data lacks a consistent definition of enrollment and we are therefore unable to confirm that all elements of a patient care are captured within the given health system. As a result, misclassification may occur and data should be interpreted with this limitation in mind.

Notes: Please contact the Sentinel Operations Center (info@sentinelssystem.org) for questions and to provide comments/suggestions for future enhancements to this document. Glossary of Terms for Analyses Using PCORnet Modular Program (PMP) Tool

Health Event of Interest (HEI) - the HEI represents the index exposure or health event that should be used to define the cohort. All patients within a cohort will be required to have the HEI. Cohorts can be further refined or restricted through the use of inclusion/exclusion criteria.

Query Period - the time range from the start of the query identification period to the end of the query identification period. The identification of HEIs is restricted to the query period. Identification of inclusion/exclusion criteria, covariates and vital measures are **NOT** restricted to the query period.

Enrollment Requirement - indicates the parameter options used to define enrollment, based on the encounters table.

EB1 - Patients must have at least one encounter within a specified query period.

EB2 - Patients must have a minimum number of records in the specified query period, with a minimum number of days between the first and last encounter. Users can indicate if records can come from any combination of encounter, diagnosis, procedure, dispensing, prescribing, or lab result tables. For encounter, diagnosis and procedure records, users have the option to limit valid records to specific care settings.

"Patients must have at least two encounters of an ambulatory (AV) or inpatient (IP) encounter type between 01/01/2015-12/31/2016, with at least sixty days between the first and last encounter."

EB2 Number - Number of records to be included in denominator (exposed and unexposed population). This parameter is only applied when an EB2 enrollment definition is selected.

EB2 List - Can be used to limit identification of enrollment proxy records to specific care settings. Can only be defined when the EB2 Table is set to a combination of encounter, diagnosis, or procedure tables. Acceptable values are listed under "Care Setting" in this document. This parameter is only applied when an EB2 enrollment definition is selected.

EB2 Days - Minimum number of days between first and last record. This parameter is only applied when an EB2 enrollment definition is selected.

EB2 Table - Indicates which common data model (CDM) table should be checked for contributing records. This parameter is only applied when an EB2 enrollment definition is selected.

Age Group - parameter for restricting the cohort of interest to certain age groups and specifying age group stratification in result tables.

Age Calculation - indicates which method of calculation will be used for patient age.

Fixed (F) - age calculated on last day of query period.

Index (I) - age calculated at date of HEI index event.

Sex - optional sex categories for stratification in result tables. Users should specify which specific groups they would like included as separate strata. All patients whose sex does not fall into one of these categories will be categorized as "Other"

Ambiguous (A)

Female (F)

Male (M)

No Information (NI)

Unknown (UN)

Other (OT)

Race - optional race categories for stratification in result tables. Users should specify which specific groups they would like included as separate strata. All patients whose race does not fall into one of these categories will be categorized as "Other"

American Indian or Alaska Native (01)

Asian (02)

Black or African American (03)

Native Hawaiian or Other Pacific Islander (04)

White (05)

Multiple Race (06)

Hispanic - optional ethnicity categories for stratification in result tables. Users should specify which specific groups they would like included as separate strata. All patients whose ethnicity does not fall into one of these categories will be categorized as "Other"

Yes (Y)
 No (N)
 Refuse to Answer (R)
 No Information (NI)
 Unknown (UN)

Difference Table - The difference table captures patients who meet all enrollment proxy and inclusion/exclusion criteria and have at least one valid record within the same CDM tables as the HEI-defining codelists, but who DO NOT have an HEI code. These patients are intended to serve as a rough proxy for an unexposed population. However, limitations of Electronic Health Record systems should be considered when results interpreting this group.

Cohort Quality Assessment Module - Cohort Quality Assessment is an optional module that can be run on the numerator and the difference table populations to perform data quality and availability assessments. CQA will output counts, distributions, and frequencies on any of the variables within the PCORnet CDM tables. Cross-variable checks are also permitted within CDM tables (e.g. a distribution of result_number by result_unit can be requested in the Lab Result table.) Data assessments will be limited to the cohorts formed using PMP functionality. Users can limit checks to specific calendar-based time periods (e.g. 2016-2017) and to code lists of interest (e.g., provide a distribution of result_num values for records with an HbA1c LOINC code in the Lab Result table.)

Counts - returns counts of all qualifying records, and of all unique patients with qualifying records in a given table, limited by specified criteria. Counts can be performed against ID variables within the PCORnet CDM.

"What is the count of unique and all patient IDs in records in the Diagnosis table, limited to records for Diabetes or Heart Failure diagnosis?"

Frequency - returns frequency of values occurring for a specified variable. Frequencies can be performed against categorical variables within the PCORnet CDM.

"How frequently are each dose ordered unit value occurring in Warfarin prescribing records?"

Distribution - returns percentile-based summary statistics. Distributions can be performed against numeric variables within the PCORnet CDM.

"What is the distribution of warfarin dose ordered in prescribing records when the dose ordered unit is mg?"

Baseline Table (Covariate Assessment) Module - Baseline Table is an optional module that can be run to generate a Table 1 for your PMP-formed cohort. Users can indicate a list of covariates and the baseline table will provide counts and percentage of your PMP-formed cohort who have the covariate of interest. Covariates can be identified in a time period relative to your HEI date (e.g. in the 365 days prior to the HEI) or within a set period of calendar time (e.g., in 2016).

"Of the patients with a Heart Failure primary diagnosis in 2017, how many had a Diabetes diagnosis in the previous year?"

Vitals Module - Vitals module is an optional module that further stratifies cohorts based on vitals records, including height, weight, BMI, smoking and tobacco use statuses. Users will indicate a period relative to the HEI date in which to identify vital records and the program will search for the vital record closest to the index date and classify according to user-requested stratifications. Vital measures can be cross-stratified against certain demographic data, including age, sex, race, and ethnicity.

"What is the BMI distribution of patients who had a Diabetes diagnosis record in 2015?"

¹ All metrics are based on total number of patients meeting cohort criteria. Patients can appear in multiple age strata and year strata since they can meet criteria in more than one age strata/time-based strata. Value represents standard deviation where no % follows the value.

² Twenty comorbidity conditions, defined using International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-09-CM) and International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) diagnosis codes (Appendix F), contribute to the comorbidity score and each condition is assigned a pre-defined weight. The CCS module will identify all comorbidity conditions experienced by each patient in a cohort within a user-specified period, assign the weight for each condition, and calculate a patient-level comorbidity score by summing the weights. The module calculates an aggregate, cohort-level comorbidity score based on the mean and standard deviation of comorbidity scores for patients within the cohort of interest. Only aggregate comorbidity scores are reported on.

Gagne JJ, Glynn RJ, Avorn J, Levin R, Schneeweiss S. A combined comorbidity score predicted mortality in elderly patients better than existing scores. J Clin Epidemiol. 2011 Jul;64(7):749-59. doi: 10.1016/j.jclinepi.2010.10.004. Epub 2011 Jan 5. PMID: 21208778; PMCID: PMC3100405.

³ For populated address history measures, the reported value within a specified period around the Health Event of Interest represents the closest address measure to the Health Event of Interest. The reported value for "Current" assessment represents the most recent record address record. For additional information regarding selection of the address measure, please contact the PCORnet Query Fulfillment team.

⁴ Patient 5-Digit Zip Codes are mapped to socioeconomic status by normalized Area Deprivation Index (ADI) value (0-100). Lower values are associated with lower deprivation and higher values are associated with higher deprivation. A ranking of 1 indicates the lowest level of "disadvantage" within the nation and an ADI with a ranking of 100 indicates the highest level of "disadvantage". For this mapping, values are grouped into quartiles using the count of zip codes. Quartile 1 represents the lowest range of ADI values and Quartile 4 represents the highest range of ADI values (Q1=0-38, Q2=39-43, Q3=44-49, and Q4=50-100). For additional information regarding the ADI index, see the Neighborhood Atlas here: <https://www.neighborhoodatlas.medicine.wisc.edu/>.

⁵ Address history record missingness represents patients for whom all eligible address history records within the assessment period are missing information on the requested address history field of interest.

Appendix G. Specifications Defining Parameters for this Request

This query request will identify the following counts of patients of any age with the following during the query period of July 1, 2018 to July 1, 2022:

- (1) Cannabis or cannabis-derived product (except Epidiolex) in medication record among patients with a prior diagnosis (**ALL_DX**)
- (2) Cannabis or cannabis-derived product (except Epidiolex) in medication record among all patients (**CAN_ALL**)
- (3) Cannabidiol use, except Epidiolex (brand), reported in medication record, among patients with any prior diagnosis (can include Epidiolex reported at the cannabidiol ingredient level) (**CAN_CBD_DX**)
- (4) Cannabidiol use, except Epidiolex (brand), reported in medication record, among all patients (can include Epidiolex reported at the cannabidiol ingredient level) (**CAN_CBD**)
- (5) Epidiolex (brand) use reported in medication record among patients with any prior diagnosis (**CAN_APP_DX**)
- (6) Epidiolex (brand) use reported in medication record among all patients (**CAN_APP**)
- (7) Laboratory test for THC in urine with either a positive, presumptive positive, or detected result OR a result that was >50 ng/ml among patients with any prior diagnosis (**THC_LAB_DX**)
- (8) Laboratory test for THC in urine with either a positive, presumptive positive, or detected result OR a result that was >50 ng/ml result record among all patients (**THC_LAB**)
