

Disclaimer

The following report provides findings from an FDA-initiated query using Sentinel. While Sentinel queries may be undertaken to assess potential medical product safety risks, they may also be initiated for various other reasons. Some examples include determining a rate or count of an identified health outcome of interest, examining medical product use, exploring the feasibility of future, more detailed analyses within Sentinel, and seeking to better understand Sentinel capabilities.

Data obtained through Sentinel are intended to complement other types of evidence such as preclinical studies, clinical trials, post market studies, and adverse event reports, all of which are used by FDA to inform regulatory decisions regarding medical product safety. The information contained in this report is provided as part of FDA's commitment to place knowledge acquired from Sentinel in the public domain as soon as possible. Any public health actions taken by FDA regarding products involved in Sentinel queries will continue to be communicated through existing channels.

FDA wants to emphasize that the fact that FDA has initiated a query involving a medical product and is reporting findings related to that query does not mean that FDA is suggesting health care practitioners should change their prescribing practices for the medical product or that patients taking the medical product should stop using it. Patients who have questions about the use of an identified medical product should contact their health care practitioners.

The following report contains a description of the request, request specifications, and results from the modular program run(s).

Appendix B. List of Current Procedural Terminology, Fourth Edition (CPT-4) Procedure Codes Used to Define Penicillin Allergy Testing in this Request

Code	Description	Code Type	Code Category
95004	Percutaneous tests (scratch, puncture, prick) with allergenic extracts, immediate type reaction, including test interpretation and report, specify number of tests	CPT-4	Procedure
95018	Allergy testing, any combination of percutaneous (scratch, puncture, prick) and intracutaneous (intradermal), sequential and incremental, with drugs or biologicals, immediate type reaction, including test interpretation and report, specify number of tests	CPT-4	Procedure
95024	Intracutaneous (intradermal) tests with allergenic extracts, immediate type reaction, including test interpretation and report, specify number of tests	CPT-4	Procedure

Appendix C. List of International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) and International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) Diagnosis Codes Used to Define Penicillin Allergy Status in this Request

Code	Description	Code Type	Code Category
V14.0	Personal history of allergy to penicillin	ICD-9-CM	Diagnosis
Z88.0	Allergy status to penicillin	ICD-10-CM	Diagnosis

Appendix D. Specifications for Parameters for this Request

This request utilized the Cohort Identification and Descriptive Analysis (CIDA) module, version 7.0.5 to estimate the prevalence of penicillin allergy testing in the Sentinel Distributed Database (SDD).

Query period: January 1, 2008 - August 31, 2018
Enrollment gap: 45 days
Age groups: 0-16, 17+ years
Pre-index enrollment requirement: 0 days
Post-index enrollment requirement: 0 days
Coverage requirement: At Least Medical Coverage
Stratifications: Calendar year; Age group by Calendar year; Sex by Age group by Calendar year
