

Disclaimer

The following report(s) provides findings from an FDA-initiated query using Sentinel. While Sentinel queries may be undertaken to assess potential medical product safety risks, they may also be initiated for various other reasons. Some examples include determining a rate or count of an identified health outcome of interest, examining medical product use, exploring the feasibility of future, more detailed analyses within Sentinel, and seeking to better understand Sentinel capabilities.

Data obtained through Sentinel are intended to complement other types of evidence such as preclinical studies, clinical trials, postmarket studies, and adverse event reports, all of which are used by FDA to inform regulatory decisions regarding medical product safety. The information contained in this report is provided as part of FDA's commitment to place knowledge acquired from Sentinel in the public domain as soon as possible. Any public health actions taken by FDA regarding products involved in Sentinel queries will continue to be communicated through existing channels.

FDA wants to emphasize that the fact that FDA has initiated a query involving a medical product and is reporting findings related to that query does not mean that FDA is suggesting health care practitioners should change their prescribing practices for the medical product or that patients taking the medical product should stop using it. Patients who have questions about the use of an identified medical product should contact their health care practitioners.

The following report contains a description of the request, request specifications, and results from the modular program run(s).

Overview for Request: cder_mpl1r_wp245

Request ID: cder_mpl1r_wp245

Request Description: In this report, we characterized pediatric demographics and enrollment in the Sentinel Distributed Database for members who were aged 21 years or less between January 1, 2000 and May 8, 2023.

Sentinel Routine Querying Module: Cohort Identification and Descriptive Analysis (CIDA) module, version 12.1.2.

Data Source: We distributed this request to 12 Sentinel Data Partners on August 11, 2023. The study period included data from January 1, 2000, to May 8, 2023. Please see Appendix A for a list of dates of available data for each Data Partner.

Study Design: In this report we examined counts, demographic, and clinical characteristics of the pediatric population in the Sentinel Distributed Database. We grouped the pediatric population into the following cohorts: 1) Newborns, 2) Infants and toddlers, 3) Young children, 4) Older children, 5) Early adolescents, and 6) Late adolescents. This is a Type 1 analysis in the Query Request Package (QRP) documentation.

Cohort Eligibility Criteria: We required members to be enrolled in health plans with medical and drug coverage on index date to be included in any of the pediatric groups. The index date was the age anniversary date on which an individual becomes eligible for one of the cohorts. We defined the cohorts by age group as follows:

- 1) Newborns: 0 to 28 days old
- 2) Infants and toddlers: 29 days to less than 2 years old
- 3) Young children: 2 years to less than 6 years old
- 4) Older children: 6 years to less than 12 years old
- 5) Early adolescents: 12 years to less than 18 years old
- 6) Late adolescents: 18 to 21 years old

We identified index dates between January 1, 2000 and May 8, 2023. We began follow-up on the index date and continued until the first occurrence of any of the following: 1) death; 2) the end of the data provided by each Data Partner; 3) the end of the query period. See Appendix B for ages used to define age groups in this request.

Baseline Characteristics: We assessed the following characteristics:

a) Demographics: We assessed the following demographics on index date - age, sex, race, ethnicity, and year.

The assessment time window for the following covariate was 365 days after the index date for all age groups except for newborns, which was 28 days instead. This window is kept consistent for all pediatric members. If the index date happened less than 365 days (28 days for the newborn age group) before a pediatric member moved into the next age group, the covariate assessment period extended into the next age group to ensure that everyone had a sufficient and consistent opportunity to gather covariate information.

b) Vaccinations: We assessed the following vaccination records - Hepatitis B vaccine and COVID-19 vaccine from the index date through 28 days after the index, for newborns. For older age groups, we assessed the following vaccination records from index date through 365 days after index: COVID-19 vaccine; diphtheria pertussis, and tetanus vaccine (Tdap); hepatitis A vaccine; hepatitis B vaccine; inactivated influenza or live attenuated Influenza; inactive polio vaccine; measles, mumps, rubella vaccine (MMR); pneumococcal vaccine, rotavirus vaccine; varicella vaccine; Haemophilus influenzae type B vaccine; meningococcal ACWY vaccine; human papillomavirus vaccine; and meningococcal B vaccine.

Vaccinations reported for each age group if recommended by the Advisory Committee on Immunization Practices (ACIP) generally or for high-risk individuals in that age group.

Overview for Request: cder_mpl1r_wp245

c) Comorbidities: We assessed the following comorbidities among newborns within the first 28 days: allergies, hypersensitivities, and allergic reactions; anemia; cancer of the brain and other parts of the central nervous system; cancer of the lymphoid, hematopoietic and related tissue; other cancers; diabetes; epilepsy; fetal alcohol syndrome; gastroesophageal reflux disease; hypertension; influenza; intellectual disabilities and related conditions; inflammatory bowel syndrome; measles; meningitis; mumps; otitis; pertussis; pneumonia; rubella; sickle cell disease; sinusitis; spina bifida; necrotizing enterocolitis; retinopathy of prematurity; respiratory distress syndrome; bronchopulmonary dysplasia; and neonatal sepsis. In addition to the comorbidities (and excluding necrotizing enterocolitis, retinopathy of prematurity, respiratory distress syndrome; bronchopulmonary dysplasia, and neonatal sepsis), we assessed the following among infants and toddlers, young children, and older children from index date through 365 days: Attention Deficit Hyperactivity disorder (ADHD), anxiety, asthma, autism, and depression. We assessed the same characteristics among the early adolescents and late adolescents, in addition to sexually transmitted infections (STI) and substance use disorders from the index date through 365 days.

d) Major Congenital Malformations: We assessed the following major congenital malformations among newborns within the first 28 days and among infants, toddlers, young children, and older children from index date through 365: anotia/microtia, anophthalmia/microphthalmia, biliary atresia, cataracts, and other lens defects, choanal atresia/stenosis, cleft palate/lip, congenital hydronephrosis, diaphragmatic hernia, Encephalocele/Cranial Meningocele/Encephalomyelocele, esophageal atresia + tracheoesophageal fistula, exstrophy bladder, gastroschisis or omphalocele, holoprosencephaly, hypospadias, intestinal atresia/stenosis, limb deficiency, microcephalus, other cardiac defects (septal defects/heterotaxy/papvr, Posterior urethral valve/and/or prune belly, pulmonary venous return anomalous coronary artery, pyloric stenosis, renal agenesis, renal dysplasia, sacral agenesis, severe cardiac defects), and spina bifida. **Glossary of Terms for Analyses Using
Cohort Identification and Descriptive Analysis (CIDA) Module***

Amount Supplied - number of units (pills, tablets, vials) dispensed. Net amount per NDC per dispensing.

Blackout Period - number of days at the beginning of a treatment episode that events are to be ignored. If an event occurs during the blackout period, the episode is excluded.

Care Setting - type of medical encounter or facility where the exposure, event, or condition code was recorded. Possible care settings include: Inpatient Hospital Stay (IP), Non-Acute Institutional Stay (IS), Emergency Department (ED), Ambulatory Visit (AV), and Other Ambulatory Visit (OA). For laboratory results, possible care settings include: Emergency Department (E), Home (H), Inpatient (I), Outpatient (O), or Unknown or Missing (U). The Care Setting, along with the Principal Diagnosis Indicator (PDX), forms the Care Setting/PDX parameter.

Ambulatory Visit (AV) - includes visits at outpatient clinics, same-day surgeries, urgent care visits, and other same-day ambulatory hospital encounters, but excludes emergency department encounters.

Emergency Department (ED) - includes ED encounters that become inpatient stays (in which case inpatient stays would be a separate encounter). Excludes urgent care visits.

Inpatient Hospital Stay (IP) - includes all inpatient stays, same-day hospital discharges, hospital transfers, and acute hospital care where the discharge is after the admission date.

Non-Acute Institutional Stay (IS) - includes hospice, skilled nursing facility (SNF), rehab center, nursing home, residential, overnight non-hospital dialysis and other non-hospital stays.

Other Ambulatory Visit (OA) - includes other non overnight AV encounters such as hospice visits, home health visits, skilled nursing facility visits, other non-hospital visits, as well as telemedicine, telephone and email consultations.

Charlson/Elixhauser Combined Comorbidity Score - calculated based on comorbidities observed during a requester-defined window around the exposure episode start date (e.g., in the 183 days prior to index).

Code Days - the minimum number of times the diagnosis must be found during the evaluation period in order to fulfill the algorithm to identify the corresponding patient characteristic.

Cohort Definition (drug/exposure) - indicates how the cohort will be defined: 01: Cohort includes only the first valid treatment episode during the query period; 02: Cohort includes all valid treatment episodes during the query period; 03: Cohort includes all valid treatment episodes during the query period until an event occurs.

Computed Start Marketing Date - represents the first observed dispensing date among all valid users within a GROUP (scenario) within each Data Partner site.

Days Supplied - number of days supplied for all dispensings in qualifying treatment episodes.

Eligible Members - number of members eligible for an incident treatment episode (defined by the drug/exposure and event washout periods) with drug and medical coverage during the query period.

Enrollment Gap - number of days allowed between two consecutive enrollment periods without breaking a "continuously enrolled" sequence.

Episodes - treatment episodes; length of episode is determined by days supplied in one dispensing or consecutive dispensings bridged by the episode gap.

Episode Gap - number of days allowed between two (or more) consecutive exposures (dispensings/procedures) to be considered the same treatment episode.

Event Deduplication - specifies how events are counted by the Modular Program (MP) algorithm: 0: Counts all occurrences of a health outcome of interest (HOI) during an exposure episode; 1: de-duplicates occurrences of the same HOI code and code type on the same day; 2: de-duplicates occurrences of the same HOI group on the same day (e.g., de-duplicates at the group level).

Exposure Episode Length - number of days after exposure initiation that is considered "exposed time."

Exposure Extension Period - number of days post treatment period in which the outcomes/events are counted for a treatment episode. Extensions are added after any episode gaps have been bridged.

Lookback Period - number of days wherein a member is required to have evidence of pre-existing condition (diagnosis/procedure/drug dispensing).

Maximum Episode Duration - truncates exposure episodes after a requester-specified number of exposed days. Applied after any gaps are bridged and extension days added to the length of the exposure episode.

Member-Years - sum of all days of enrollment with medical and drug coverage in the query period preceded by an exposure washout period all divided by 365.25.

Minimum Days Supplied - specifies a minimum number of days in length of the days supplied for the episode to be considered.

Minimum Episode Duration - specifies a minimum number of days in length of the episode for it to be considered. Applied after any gaps are bridged and extension days added to the length of the exposure episode.

Monitoring Period - used to define time periods of interest for both sequential analysis and simple cohort characterization requests.

Principal Diagnosis (PDX) - diagnosis or condition established to be chiefly responsible for admission of the patient to the hospital. 'P' = principal diagnosis, 'S' = secondary diagnosis, 'X' = unspecified diagnosis, '.' = blank. Along with the Care Setting values, forms the Caresetting/PDX parameter.

Query Period - period in which the modular program looks for exposures and outcomes of interest.

Switch Evaluation Step Value - value used to differentiate evaluation step. Each switch pattern can support up to 2 evaluation steps (0 = switch pattern evaluation start; 1 = first evaluation; 2 = second evaluation).

Switch Gap Inclusion Indicator - indicator for whether gaps in treatment episodes that are included in a switch episode will be counted as part of the switch episode duration.

Switch Pattern Cohort Inclusion Date - indicates which date to use for inclusion into the switch pattern cohort of interest as well as optionally as the index date of the treatment episode initiating the switch pattern. Valid options are the product approval date, product marketing date, other requester defined date, or computed start marketing date.

Switch Pattern Cohort Inclusion Strategy - indicates how the switch pattern cohort inclusion date will be used: 01: used only as a switch cohort entry date. First treatment episode dispensing date is used as index for computing time to first switch; 02: used as switch cohort entry date and as initial switch step index date for computing time to first switch.

Treatment Episode Truncation Indicator - indicates whether the exposure episode will be truncated at the occurrence of a requester-specified code.

Washout Period (drug/exposure) - number of days a user is required to have no evidence of prior exposure (drug dispensing/procedure) and continuous drug and medical coverage prior to an incident treatment episode.

Washout Period (event/outcome) - number of days a user is required to have no evidence of a prior event (procedure/diagnosis) and continuous drug and medical coverage prior to an incident treatment episode.

Years at Risk - number of days supplied plus any episode gaps and exposure extension periods all divided by 365.25.
