

## Disclaimer

The following report(s) provides findings from an FDA-initiated query using Sentinel. While Sentinel queries may be undertaken to assess potential medical product safety risks, they may also be initiated for various other reasons. Some examples include determining a rate or count of an identified health outcome of interest, examining medical product use, exploring the feasibility of future, more detailed analyses within Sentinel, and seeking to better understand Sentinel capabilities.

Data obtained through Sentinel are intended to complement other types of evidence such as preclinical studies, clinical trials, postmarket studies, and adverse event reports, all of which are used by FDA to inform regulatory decisions regarding medical product safety. The information contained in this report is provided as part of FDA's commitment to place knowledge acquired from Sentinel in the public domain as soon as possible. Any public health actions taken by FDA regarding products involved in Sentinel queries will continue to be communicated through existing channels.

FDA wants to emphasize that the fact that FDA has initiated a query involving a medical product and is reporting findings related to that query does not mean that FDA is suggesting health care practitioners should change their prescribing practices for the medical product or that patients taking the medical product should stop using it. Patients who have questions about the use of an identified medical product should contact their health care practitioners.

The following report contains a description of the request, request specifications, and results from the modular program run(s).

## Overview for Request: cder\_mpl1p\_wp076

**Request ID:** cder\_mpl1p\_wp076

**Request Description:** In this report, we describe infants in the Mother-Infant Linkage (MIL) table of the Sentinel Distributed Database (SDD) paired to a mother via a live-birth delivery in the MIL table, as well as infants without paired mothers in the MIL table. This is a rerun of a prior query to gain additional data since its previous release in 2020. This is Report 3 of 3. The first report includes data from all five Sentinel Data Partners that populated the MIL table. The second report (2 of 3) includes only Medicaid data that populated the MIL table. Data from the remaining four non-Medicaid data partners is included in the current report (3 of 3).

**Sentinel Routine Querying Module:** Cohort Identification and Descriptive Analysis (CIDA) module, version 10.3.2, with custom programming.

**Data Source:** We distributed this request to all four Sentinel Data Partners that populate the MIL table on September 28, 2023. The study period included live-birth deliveries from January 1, 2000 through December 31, 2022. Please see Appendix A for a list of dates of available data for each Data Partner.

**Study Design:** We used a CIDA 'Type 4' study design with custom programming to assess: 1) infant demographic characteristics, 2) mother demographics and delivery characteristics among infants with paired mothers, 3) evidence of certain major congenital malformations, comorbidities, immunizations, and medication dispensings in the infants' first 365 days of enrollment, and 4) evidence of certain neonatal outcomes and medication administrations in the infants' first 28 days of enrollment. We described three populations overall: 1) all infants paired to mothers (regardless of delivery type), 2) all infants paired to mothers via a live-birth singleton delivery, and 3) infants without paired mothers. There is no overlap between the paired and unpaired infant cohorts; they are mutually exclusive. We present characteristics of the latter two populations stratified by infant's first continuous enrollment duration (<1 month, 1-6 months, 6-12 months, 12-24 months, and >24 months). We additionally present characteristics of infants paired to mothers via a live-birth singleton delivery stratified by mother's age at delivery (10-17, 18-39, and 40-54 years) and length of mother's pre-delivery enrollment (<391 and ≥391 days).

**Pregnancy Episode Creation:** We identified live-birth deliveries and estimated the pregnancy episode start date using a claims-based algorithm.<sup>1-3</sup> The algorithm prioritizes International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) codes over International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) codes to assign gestational age, which can be any set of NDCs, procedure or diagnosis codes, and laboratory result values found in the data, and both diagnosis codes for pre-term and post-term deliveries. Codes had to occur within seven days of a delivery date in the inpatient setting. In the absence of pre-/post-term or gestational week codes, pregnancy duration was set to 273 days. Pregnancies were excluded from the cohort if there was evidence of another delivery in the 180 days before the delivery date of interest. Please see Appendix B for the list of ICD-9-CM and ICD-10 CM codes used to identify live-birth deliveries.

The original algorithm<sup>1-3</sup> identifying gestational age was modified to include ICD-10-CM codes.

**Cohort Eligibility Criteria:** Only infants from live-birth deliveries present in the MIL table were considered for the cohort. To be eligible for the MIL table, infant date of birth must be at least one year later than the start of Data Partner data availability and they must have at least one day of enrollment with medical coverage during their first year of life. In order to successfully link a mother to her infant via the live-birth delivery, the delivery encounter must have occurred at least one year later than the start of Data Partner data availability, and the mother had to be between 10 and 54 years of age with at least 180 days of continuous medical coverage (gaps of up to 45 days allowed) without evidence of delivery in the 180 days prior to index live-birth delivery. We additionally required mothers to be enrolled in health plans with medical and drug coverage in the 391 days prior to their delivery date in order to be included in the cohort; a gap in coverage of up to 45 days was allowed and treated as continuous enrollment. For infants paired to a mother, infants were required to have medical and drug coverage at enrollment start. There was no limitation set on the length of time between infant birth date and enrollment start. The infant's birth date was required to be within three days of the delivery date (defined as the admission date for the delivery encounter).

### Overview for Request: cder\_mpl1p\_wp076

**Baseline Characteristics:** We assessed mother demographics and delivery characteristics, and infant demographics, medication administrations, medication dispensing, immunizations, comorbidities, neonatal outcomes, and major congenital malformations within the infant, mother, or both medical records at 0-28, 0-365, or 29-365 days, depending on the characteristic of interest. Please see Appendix C for a list of ICD-9-CM, ICD-10-CM, International Classification of Diseases, Tenth Revision, Procedural Classification System (ICD-10-PCS), Healthcare Common Procedure Coding System (HCPCS), and Current Procedural Terminology, Fourth Edition (CPT-4) codes used to define baseline characteristics in this request. Please see Appendix D for a list of ICD-9-CM, ICD-10-CM, HCPCS, and CPT-4 codes used to define live birth delivery exclusion in this request. Please see Appendix E for a list of generic and brand name medical products used to define baseline characteristics in this request. Please see Appendices F, G and H for specifications defining parameters and Appendix I for diagrams detailing the design of this request.

**Limitations:** Algorithms used to estimate pregnancy duration, baseline characteristics, and exposures are imperfect; thus, it is possible that there may be misclassification. Therefore, data should be interpreted with this limitation in mind.

**Notes:** Please contact the Sentinel Operations Center ([info@sentinelssystem.org](mailto:info@sentinelssystem.org)) for questions and to provide comments/suggestions for future enhancements to this document. **Glossary of Terms for Analyses Using  
Cohort Identification and Descriptive Analysis (CIDA) Module\***

**Amount Supplied** - number of units (pills, tablets, vials) dispensed. Net amount per NDC per dispensing.

**Blackout Period** - number of days at the beginning of a treatment episode that events are to be ignored. If an event occurs during the blackout period, the episode is excluded.

**Care Setting** - type of medical encounter or facility where the exposure, event, or condition code was recorded. Possible care settings include: Inpatient Hospital Stay (IP), Non-Acute Institutional Stay (IS), Emergency Department (ED), Ambulatory Visit (AV), and Other Ambulatory Visit (OA). For laboratory results, possible care settings include: Emergency Department (E), Home (H), Inpatient (I), Outpatient (O), or Unknown or Missing (U). The Care Setting, along with the Principal Diagnosis Indicator (PDX), forms the Care Setting/PDX parameter.

**Ambulatory Visit (AV)** - includes visits at outpatient clinics, same-day surgeries, urgent care visits, and other same-day ambulatory hospital encounters, but excludes emergency department encounters.

**Emergency Department (ED)** - includes ED encounters that become inpatient stays (in which case inpatient stays would be a separate encounter). Excludes urgent care visits.

**Inpatient Hospital Stay (IP)** - includes all inpatient stays, same-day hospital discharges, hospital transfers, and acute hospital care where the discharge is after the admission date.

**Non-Acute Institutional Stay (IS)** - includes hospice, skilled nursing facility (SNF), rehab center, nursing home, residential, overnight non-hospital dialysis and other non-hospital stays.

**Other Ambulatory Visit (OA)** - includes other non overnight AV encounters such as hospice visits, home health visits, skilled nursing facility visits, other non-hospital visits, as well as telemedicine, telephone and email consultations.

**Charlson/Elixhauser Combined Comorbidity Score** - calculated based on comorbidities observed during a requester-defined window around the exposure episode start date (e.g., in the 183 days prior to index).

**Code Days** - the minimum number of times the diagnosis must be found during the evaluation period in order to fulfill the algorithm to identify the corresponding patient characteristic.

**Cohort Definition (drug/exposure)** - indicates how the cohort will be defined: 01: Cohort includes only the first valid treatment episode during the query period; 02: Cohort includes all valid treatment episodes during the query period; 03: Cohort includes all valid treatment episodes during the query period until an event occurs.

**Computed Start Marketing Date** - represents the first observed dispensing date among all valid users within a GROUP (scenario) within each Data Partner site.

**Days Supplied** - number of days supplied for all dispensings in qualifying treatment episodes.

**Eligible Members** - number of members eligible for an incident treatment episode (defined by the drug/exposure and event washout periods) with drug and medical coverage during the query period.

**Enrollment Gap** - number of days allowed between two consecutive enrollment periods without breaking a "continuously enrolled" sequence.

**Episodes** - treatment episodes; length of episode is determined by days supplied in one dispensing or consecutive dispensings bridged by the episode gap.

**Episode Gap** - number of days allowed between two (or more) consecutive exposures (dispensings/procedures) to be considered the same treatment episode.

**Event Deduplication** - specifies how events are counted by the Modular Program (MP) algorithm: 0: Counts all occurrences of a health outcome of interest (HOI) during an exposure episode; 1: de-duplicates occurrences of the same HOI code and code type on the same day; 2: de-duplicates occurrences of the same HOI group on the same day (e.g., de-duplicates at the group level).

**Exposure Episode Length** - number of days after exposure initiation that is considered "exposed time."

**Exposure Extension Period** - number of days post treatment period in which the outcomes/events are counted for a treatment episode. Extensions are added after any episode gaps have been bridged.

**Lookback Period** - number of days wherein a member is required to have evidence of pre-existing condition (diagnosis/procedure/drug dispensing).

**Glossary of Terms for Analyses Using  
Cohort Identification and Descriptive Analysis (CIDA) Module\***

**Maximum Episode Duration** - truncates exposure episodes after a requester-specified number of exposed days. Applied after any gaps are bridged and extension days added to the length of the exposure episode.

**Member-Years** - sum of all days of enrollment with medical and drug coverage in the query period preceded by an exposure washout period all divided by 365.25.

**Minimum Days Supplied** - specifies a minimum number of days in length of the days supplied for the episode to be considered.

**Minimum Episode Duration** - specifies a minimum number of days in length of the episode for it to be considered. Applied after any gaps are bridged and extension days added to the length of the exposure episode.

**Monitoring Period** - used to define time periods of interest for both sequential analysis and simple cohort characterization requests.

**Principal Diagnosis (PDX)** - diagnosis or condition established to be chiefly responsible for admission of the patient to the hospital. 'P' = principal diagnosis, 'S' = secondary diagnosis, 'X' = unspecified diagnosis, '.' = blank. Along with the Care Setting values, forms the Caresetting/PDX parameter.

**Query Period** - period in which the modular program looks for exposures and outcomes of interest.

**Switch Evaluation Step Value** - value used to differentiate evaluation step. Each switch pattern can support up to 2 evaluation steps (0 = switch pattern evaluation start; 1 = first evaluation; 2 = second evaluation).

**Switch Gap Inclusion Indicator** - indicator for whether gaps in treatment episodes that are included in a switch episode will be counted as part of the switch episode duration.

**Switch Pattern Cohort Inclusion Date** - indicates which date to use for inclusion into the switch pattern cohort of interest as well as optionally as the index date of the treatment episode initiating the switch pattern. Valid options are the product approval date, product marketing date, other requester defined date, or computed start marketing date.

**Switch Pattern Cohort Inclusion Strategy** - indicates how the switch pattern cohort inclusion date will be used: 01: used only as a switch cohort entry date. First treatment episode dispensing date is used as index for computing time to first switch; 02: used as switch cohort entry date and as initial switch step index date for computing time to first switch.

**Treatment Episode Truncation Indicator** - indicates whether the exposure episode will be truncated at the occurrence of a requester-specified code.

**Washout Period (drug/exposure)** - number of days a user is required to have no evidence of prior exposure (drug dispensing/procedure) and continuous drug and medical coverage prior to an incident treatment episode.

**Washout Period (event/outcome)** - number of days a user is required to have no evidence of a prior event (procedure/diagnosis) and continuous drug and medical coverage prior to an incident treatment episode.

**Years at Risk** - number of days supplied plus any episode gaps and exposure extension periods all divided by 365.25.

<sup>2</sup>Race data may not be completely populated at all Data Partners; therefore, data about race may be incomplete.

<sup>3</sup>Gestational age estimated using a claims based algorithm, previously validated in the Medication Exposure in Pregnancy Risk Evaluation Program (MEPREP), to identify pregnancies ending in a live birth. ICD-10-CM diagnosis codes indicative of weeks of gestation, and ICD-9-CM and ICD-10 CM diagnosis codes for preterm and post term deliveries, were used to calculate the length of the pregnancy episode. Codes had to occur within 7 days of a delivery data in the inpatient setting. In absence of pre-/post-term codes, pregnancy duration was set to 273 days.

<sup>4</sup>The clinical characteristics found by searching only through infant records may also show up in searches conducted through mother and infant records; as a result, overlaps may occur between the numbers in the infant and mother record searches as well as the infant search record search alone.

\*\*\*\*Data are not presented in these cells due to a small sample size or to ensure a small cell cannot be recalculated through the cells presented.

<sup>2</sup>Race data may not be completely populated at all Data Partners; therefore, data about race may be incomplete.

<sup>3</sup>Gestational age estimated using a claims based algorithm, previously validated in the Medication Exposure in Pregnancy Risk Evaluation Program (MEPREP), to identify pregnancies ending in a live birth. ICD-10-CM diagnosis codes indicative of weeks of gestation, and ICD-9-CM and ICD-10 CM diagnosis codes for preterm and post term deliveries, were used to calculate the length of the pregnancy episode. Codes had to occur within 7 days of a delivery data in the inpatient setting. In absence of pre-/post-term codes, pregnancy duration was set to 273 days.

<sup>4</sup>The clinical characteristics found by searching only through infant records may also show up in searches conducted through mother and infant records; as a result, overlaps may occur between the numbers in the infant and mother record searches as well as the infant search record search alone.

\*\*\*\*Data are not presented in these cells due to a small sample size or to ensure a small cell cannot be recalculated through the cells presented.

<sup>2</sup>Race data may not be completely populated at all Data Partners; therefore, data about race may be incomplete.

<sup>3</sup>Gestational age estimated using a claims based algorithm, previously validated in the Medication Exposure in Pregnancy Risk Evaluation Program (MEPREP), to identify pregnancies ending in a live birth. ICD-10-CM diagnosis codes indicative of weeks of gestation, and ICD-9-CM and ICD-10 CM diagnosis codes for preterm and post term deliveries, were used to calculate the length of the pregnancy episode, Codes had to occur within 7 days of a delivery data in the inpatient setting. In absence of pre-/post-term codes, pregnancy duration was set to 273 days.

<sup>4</sup>The clinical characteristics found by searching only through infant records may also show up in searches conducted through mother and infant records; as a result, overlaps may occur between the numbers in the infant and mother record searches as well as the infant search record search alone.

\*\*\*\*Data are not presented in these cells due to a small sample size or to ensure a small cell cannot be recalculated through the cells presented.

<sup>3</sup>Gestational age estimated using a claims based algorithm, previously validated in the Medication Exposure in Pregnancy Risk Evaluation Program (MEPREP), to identify pregnancies ending in a live birth. ICD-10-CM diagnosis codes indicative of weeks of gestation, and ICD-9-CM and ICD-10 CM diagnosis codes for preterm and post term deliveries, were used to calculate the length of the pregnancy episode, Codes had to occur within 7 days of a delivery data in the inpatient setting. In absence of pre-/post-term codes, pregnancy duration was set to 273 days.

<sup>1</sup>Value represents standard deviation where no % follows the value

<sup>2</sup>Race data may not be completely populated at all Data Partners; therefore, data about race may be incomplete.

<sup>3</sup>Gestational age estimated using a claims based algorithm, previously validated in the Medication Exposure in Pregnancy Risk Evaluation Program (MEPREP), to identify pregnancies ending in a live birth. ICD-10-CM diagnosis codes indicative of weeks of gestation, and ICD-9-CM and ICD-10 CM diagnosis codes for preterm and post term deliveries, were used to calculate the length of the pregnancy episode, Codes had to occur within 7 days of a delivery data in the inpatient setting. In absence of pre-/post-term codes, pregnancy duration was set to 273 days.

<sup>4</sup>The clinical characteristics found by searching only through infant records may also show up in searches conducted through mother and infant records; as a result, overlaps may occur between the numbers in the infant and mother record searches as well as the infant search record search alone.

\*\*\*\*Data are not presented in these cells due to a small sample size or to ensure a small cell cannot be recalculated through the cells presented.

<sup>2</sup>Race data may not be completely populated at all Data Partners; therefore, data about race may be incomplete.

<sup>3</sup>Gestational age estimated using a claims based algorithm, previously validated in the Medication Exposure in Pregnancy Risk Evaluation Program (MEPREP), to identify pregnancies ending in a live birth. ICD-10-CM diagnosis codes indicative of weeks of gestation, and ICD-9-CM and ICD-10 CM diagnosis codes for preterm and post term deliveries, were used to calculate the length of the pregnancy episode, Codes had to occur within 7 days of a delivery data in the inpatient setting. In absence of pre-/post-term codes, pregnancy duration was set to 273 days.

<sup>4</sup>The clinical characteristics found by searching only through infant records may also show up in searches conducted through mother and infant records; as a result, overlaps may occur between the numbers in the infant and mother record searches as well as the infant search record search alone.

\*\*\*\*\*Data are not presented in these cells due to a small sample size or to ensure a small cell cannot be recalculated through the cells presented.

<sup>2</sup>Race data may not be completely populated at all Data Partners; therefore, data about race may be incomplete.

<sup>3</sup>Gestational age estimated using a claims based algorithm, previously validated in the Medication Exposure in Pregnancy Risk Evaluation Program (MEPREP), to identify pregnancies ending in a live birth. ICD-10-CM diagnosis codes indicative of weeks of gestation, and ICD-9-CM and ICD-10 CM diagnosis codes for preterm and post term deliveries, were used to calculate the length of the pregnancy episode, Codes had to occur within 7 days of a delivery data in the inpatient setting. In absence of pre-/post-term codes, pregnancy duration was set to 273 days.

<sup>4</sup>The clinical characteristics found by searching only through infant records may also show up in searches conducted through mother and infant records; as a result, overlaps may occur between the numbers in the infant and mother record searches as well as the infant search record search alone.

\*\*\*\*Data are not presented in these cells due to a small sample size or to ensure a small cell cannot be recalculated through the cells presented.

<sup>1</sup>Value represents standard deviation where no % follows the value

<sup>2</sup>Race data may not be completely populated at all Data Partners; therefore, data about race may be incomplete.

<sup>3</sup>Gestational age estimated using a claims based algorithm, previously validated in the Medication Exposure in Pregnancy Risk Evaluation Program (MEPREP), to identify pregnancies ending in a live birth. ICD-10-CM diagnosis codes indicative of weeks of gestation, and ICD-9-CM and ICD-10 CM diagnosis codes for preterm and post term deliveries, were used to calculate the length of the pregnancy episode, Codes had to occur within 7 days of a delivery data in the inpatient setting. In absence of pre-/post-term codes, pregnancy duration was set to 273 days.

<sup>4</sup>The clinical characteristics found by searching only through infant records may also show up in searches conducted through mother and infant records; as a result, overlaps may occur between the numbers in the infant and mother record searches as well as the infant search record search alone.

\*\*\*\*Data are not presented in these cells due to a small sample size or to ensure a small cell cannot be recalculated through the cells presented.

<sup>2</sup>Race data may not be completely populated at all Data Partners; therefore, data about race may be incomplete.

<sup>3</sup>Gestational age estimated using a claims based algorithm, previously validated in the Medication Exposure in Pregnancy Risk Evaluation Program (MEPREP), to identify pregnancies ending in a live birth. ICD-10-CM diagnosis codes indicative of weeks of gestation, and ICD-9-CM and ICD-10 CM diagnosis codes for preterm and post term deliveries, were used to calculate the length of the pregnancy episode. Codes had to occur within 7 days of a delivery data in the inpatient setting. In absence of pre-/post-term codes, pregnancy duration was set to 273 days.

<sup>4</sup>The clinical characteristics found by searching only through infant records may also show up in searches conducted through mother and infant records; as a result, overlaps may occur between the numbers in the infant and mother record searches as well as the infant search record search alone.

\*\*\*\*Data are not presented in these cells due to a small sample size or to ensure a small cell cannot be recalculated through the cells presented.

212	COVID-19 vaccine, vector-nr, rS-Ad26, PF, 0.5 mL; FDA EUA 02/27/2021, 1-dose vaccine. Used to record Janssen/J&J vaccines administered in the US and in non-US locations	Procedure	CVX
213	SARS-COV-2 (COVID-19) vaccine, UNSPECIFIED; Unspecified code for COVID-19 not to be used to record patient US administration. May be used to record historic US administration if product not known. CVX code 500 should be used to record Non-US vaccine where product is not known.	Procedure	CVX
217	COVID-19, mRNA, LNP-S, PF, 30 mcg/0.3 mL dose, tris-sucrose; FDA EUA (12+ yrs) and BLA (16+ yrs), Pfizer adult primary series and IC dose tris-sucrose formulation. EUA 8/31/2022 rescinded monovalent booster dose	Procedure	CVX
218	COVID-19, mRNA, LNP-S, PF, 10 mcg/0.2 mL dose, tris-sucrose; FDA EUA (5 yrs through 11 yrs), Pfizer tris-sucrose pediatric primary series, IC, and booster	Procedure	CVX
219	COVID-19, mRNA, LNP-S, PF, 3 mcg/0.2 mL dose, tris-sucrose; FDA EUA (6 mo through 4 yrs), Pfizer tris-sucrose pediatric primary series	Procedure	CVX
221	COVID-19, mRNA, LNP-S, PF, 50 mcg/0.5 mL dose; FDA EUA Moderna, EUA 8/31/2022 rescinded use of this product for adult monovalent booster dose. Vaccine now only authorized for 6 yrs through 11 primary series and IC doses	Procedure	CVX
227	COVID-19, mRNA, LNP-S, PF, pediatric 50 mcg/0.5 mL dose; Temporarily inactivated - Use CVX code 221 for EUA Moderna Pediatric 6yr to<12 yr vaccine 2.5 mL vial, 50 mcg/0.5 mL dose	Procedure	CVX
228	COVID-19, mRNA, LNP-S, PF, pediatric 25 mcg/0.25 mL dose; FDA EUA Authorized (6 mo through 5 yrs), Moderna pediatric primary series and IC dose	Procedure	CVX

### Appendix E. Specifications Defining General Parameters for this Request

The Sentinel Core Team has requested execution of the Cohort Identification and Descriptive Analysis (CIDA) Pregnancy tool QRP version 10.3.2 with custom programming, to characterize linked and unlinked infants in the Mother-Infant Linkage (MIL) table in the Sentinel Distributed Database (SDD).

**Query period (*bound by the delivery date*):** 01/01/2000 - Most Recent

**Coverage requirement:** \*Medical & Drug Coverage

**Enrollment requirement prior to index date:** 0 Days

**Requirement post index date:** 0 Days

**Minimum enrollment requirement prior to delivery date:** 301 Days

**Enrollment gap:** 45 Days

**Pre-pregnancy period (*relative to pregnancy start date*):** 0 Days

**Mother's Age groups (*calculated at delivery date*):** 10-54 years

**Sex:** Female only

**Sex of infant:** Female, Male, and Other

**Stratifications:** A) Mother's age at delivery, B) mother's pre-delivery enrollment, C) infant's follow-up time

**Output by gestational week:** No

**Restrictions:** No

**Envelope macro:** \*Reclassify encounters during inpatient stay as inpatient

**Freeze data:** No
