

## Disclaimer

The following report(s) provides findings from an FDA-initiated query using Sentinel. While Sentinel queries may be undertaken to assess potential medical product safety risks, they may also be initiated for various other reasons. Some examples include determining a rate or count of an identified health outcome of interest, examining medical product use, exploring the feasibility of future, more detailed analyses within Sentinel, and seeking to better understand Sentinel capabilities.

Data obtained through Sentinel are intended to complement other types of evidence such as preclinical studies, clinical trials, postmarket studies, and adverse event reports, all of which are used by FDA to inform regulatory decisions regarding medical product safety. The information contained in this report is provided as part of FDA's commitment to place knowledge acquired from Sentinel in the public domain as soon as possible. Any public health actions taken by FDA regarding products involved in Sentinel queries will continue to be communicated through existing channels.

FDA wants to emphasize that the fact that FDA has initiated a query involving a medical product and is reporting findings related to that query does not mean that FDA is suggesting health care practitioners should change their prescribing practices for the medical product or that patients taking the medical product should stop using it. Patients who have questions about the use of an identified medical product should contact their health care practitioners.

The following report contains a description of the request, request specifications, and results from the modular program run(s).

If you are using a web page screen reader and are unable to access this document, please contact the Sentinel Operations Center for assistance at [info@sentinelssystem.org](mailto:info@sentinelssystem.org).

## Overview for Request: cder\_iqp\_wp032

**Request ID:** cder\_iqp\_wp032

**Requester:** Center for Drug Evaluation and Research (CDER)

**Request Description:** In this report we aimed to characterize two cohorts of interest: 1) individuals with evidence of cannabis and cannabis-derived products, other than cannabidiol or Epidiolex, and 2) individuals with evidence of cannabidiol products, excluding the approved cannabidiol product Epidiolex, identified using natural language processing (NLP). We additionally estimated the number of pregnant patients who had evidence of each exposure of interest during pregnancy.

**Data Source:** We ran this query on February 28, 2023. This query contains data from 75 health care organizations (HCOs), provided through the TriNetX Live™ platform in their USA Network from July 1, 2018 to the most recently available data, January 26, 2023.

TriNetX aggregates electronic health record (EHR) systems data from its partner HCOs to create queryable datasets. TriNetX datasets are primarily comprised of clinical patient data such as demographics, diagnoses, procedures, labs, and medications. For more information on the TriNetX Live™ platform and the TriNetX data visit their website here: <https://trinetx.com/>

**Study Design:** In this retrospective cohort study, we identified counts of individuals with evidence of cannabis or a cannabis-derived product, other than cannabidiol or Epidiolex, and individuals with evidence of cannabidiol from NLP and no evidence of brand name Epidiolex, among a cohort of patients with a history of healthcare visits prior to exposure. This was done using the Query Builder module in the TriNetX Live™ platform. For these two main exposed cohorts of interest, we additionally summarized the length of individuals' patient record using the Summary Statistics module and each cohort's demographic distribution using the Explore Cohort module. We also utilized the Analyze Outcomes analytics module to determine the number of patients in the cohort with our baseline characteristics of interest, co-exposures, and subsequent cannabis-derived product exposures.

We also used TriNetX's Query Builder module to identify separate cohorts of patients with evidence of an exposure of interest during pregnancy. There is no gold standard for pregnancy identification in EHR data; therefore we employed two strategies for cohort creation to estimate evidence of exposure during pregnancy: 1) we anchored on evidence of the exposure of interest and looked for evidence of a pregnancy (ultrasound codes, gestational age codes, or a positive pregnancy test) in the month before or after exposure, and 2) we anchored on evidence of a gestational age code and based on the specific week of the gestational age, looked backwards to the start of the pregnancy or forwards through the maximum length of a pregnancy (42 weeks) for evidence of the exposure prior to the occurrence of a pregnancy outcome (spontaneous abortion, stillbirth, or live birth). We also provided overall denominator counts of the number of patients identified by the pregnancy strategy, with or without exposure, during the time period. Please see the section below for further details on pregnancy identification.

**Exposures of Interest:** Our two exposures of interest in this request were 1) all cannabis and cannabis-derived products other than cannabidiol or Epidiolex, and 2) cannabidiol sourced from NLP, excluding known Epidiolex. We identified Epidiolex based on evidence of the brand name or a cannabidiol product with a strength of 100 mg/ml. Please see Appendix A for the list of codes used to define the exposures of interest in this request.

**Cohort Eligibility Criteria:** In the two main cohorts focused on exposure identification and cohort characterization, we required every patient to have a history of a healthcare visit in order to be included in each cohort. We defined a history of healthcare visits as evidence of any type of visit term in the two years prior to any cannabis-derived product or cannabidiol exposure that occurred during the query period. Patients of all ages were included in the cohorts.

## Overview for Request: cder\_iqp\_wp032

**Characteristics:** We utilized the Characteristics section of the Analyze Outcomes analytic module to evaluate the following baseline characteristics in the 365 days prior to and including the date of the first qualifying cannabis-derived product or cannabidiol exposure (index exposure) for the two main exposure cohorts: alcohol-related disorders, attention-deficit hyperactivity disorders (ADHD), anxiety disorders, autism, cancer, cannabis-related disorders, cerebrovascular diseases, chronic kidney disease, dorsalgia (back and spine pain), fibromyalgia, pain (including chronic pain syndrome and chronic pain not elsewhere classified), pain (unspecified), chronic respiratory conditions, dementia (unspecified), dementia (vascular), diabetes, Dravet syndrome, dystonia, eating disorders, glaucoma, human immunodeficiency virus/acquired immunodeficiency syndrome (HIV/AIDS), Huntington's disease, hypertension, intracranial injury, irritable bowel syndrome, ischemic heart diseases, Lennox-Gastaut syndrome, liver disease, mood disorders, multiple sclerosis, nicotine dependence, nicotine use, obesity, opioid-related disorders, other epilepsies, Parkinson's disease, personality disorders, post-traumatic stress disorder, psychologic developmental conditions, psychotic disorders, rheumatologic and inflammatory conditions, sleep disorders, spinal cord injury, Tourette syndrome, tuberous sclerosis complex, and vaping-related disorders.

We further utilized the Characteristics module section to assess co-exposures in the 30 days prior to and including the index date. These co-exposures included: anticonvulsants, antidepressants, antidiabetic agents, antiemetic agents, antihistamines, antipsychotics, anxiolytic and hypnotic drugs, cardiovascular medications, chemotherapeutics, central nervous system (CNS) stimulants, corticosteroids, dronabinol, nabilone, opioids, and other immunosuppressants. In the TriNetX platform, all pre-index characteristics must be defined by a single branch within the International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) hierarchy or by a single Veterans Affairs (VA) formulary classification. Please see Appendix B for a list of the codes used to approximate these baseline characteristics.

We utilized the Outcomes section of the Analyze Outcomes analytics module to assess additional post-index characteristics for each cohort. We looked for evidence of the co-exposures in the 30 days after the index exposure. For the co-exposures we assessed the same medication classes as the pre-index period. We finally summarized subsequent cannabis-derived product exposure in the 365 days following the initial index exposure. We evaluated all cannabis and cannabis-derived products other than cannabidiol or Epidiolex, and then separately assessed any cannabidiol (including Epidiolex) derived from structured EHR data, any cannabidiol derived from NLP data, and positive tetrahydrocannabinol (THC) labs. We report both the number of patients in each cohort with a subsequent exposure and the mean number of exposures per patient, for the cannabis-derived product and positive THC lab outcomes; for the cannabidiol outcomes we only present the number of patients with a subsequent exposure due to platform output limitations. Please see Appendix C for a list of the codes used to define the post-index characteristics in this request.

**Pregnancy Evaluation:** For each exposure of interest, we identified four pregnancy-based cohorts:

1. Index on exposure and look for evidence of pregnancy (ultrasound, gestational age, or positive pregnancy test) within [-30, 30] days of exposure
2. Index on a first trimester gestational age code of X weeks, and look for evidence of the exposure of interest within [-X, 42-X] weeks of the gestational age code<sup>1</sup>. Exclude any patients that additionally had evidence of a second or third trimester gestational age code during the evaluation window, and any patients that had evidence of a pregnancy outcome<sup>2</sup> prior to their exposure.
3. Index on a second or third trimester gestational age code of Y weeks, and look for evidence of the exposure of interest within [-Y, 42-Y] weeks of the gestational age code<sup>1</sup>. Exclude any patients that additionally had evidence of a first trimester gestational age code during the evaluation window, and any patients that had evidence of a pregnancy outcome<sup>2</sup> prior to their exposure.
4. Index on a first trimester gestational age code of X weeks, and look for evidence of the exposure of interest within [-X, 42-X] weeks of the gestational age code<sup>1</sup>. Patients must also have evidence of a second or third trimester gestational age code during the evaluation window. Exclude any patients that had evidence of a pregnancy outcome<sup>2</sup> prior to their exposure.

### Overview for Request: cder\_iqp\_wp032

**Pregnancy Evaluation, continued:** We created three cohorts based on gestational age to create mutually exclusive cohorts so that patients would not be double-counted across cohorts. When evaluating for the pregnancy outcome exclusion criteria, we looked for evidence of a pregnancy outcome in the 90 days prior to and including the date of the exposure of interest. Please see Appendix D for a list of codes used to define the cohort exclusion criteria and Appendix E for a visual representation of how the gestational age-specific evaluation windows were implemented.

**Please see Appendices F and G for the specifications of parameters used in this request.**

**Limitations:** Algorithms used to define exposures, characteristics, pregnancy, and mapping of source data to the data model are imperfect and susceptible to misclassification. Additionally, EHR data in the United States (US) lacks longitudinality. The information before or after patients' healthcare encounters could be missing, especially if patient care was administered across different HCOs that may or might not participate in the TriNetX USA network. We are unable to determine if absence of evidence of a condition implies a true absence of a condition or if the condition was not observed in the data. Furthermore, not all HCOs provide brand name information for RxNorm terms or laboratory data. Therefore, data should be interpreted with these limitations in mind.

All counts provided through the TriNetX Live™ platform are rounded up to the nearest 10 to protect patient privacy. This rounding affects error, especially as sample sizes decrease. Error due to rounding can range from <0.09% when sample sizes are >10,000 to nearly 20% as sample sizes drop. Thus, all estimates should be interpreted as ranges, and small sample sizes should be interpreted with caution. Additionally, percentages are calculated based on these rounded numerators and denominators. Thus, due to rounding, the sum of each value in a category may not total to 100%.

**Notes:** We ran this query on February 28, 2023. A re-run of this query for the same query period in the future may not yield the same results owing to the dynamic nature of the TriNetX Live™ network.

Please contact the Sentinel Operations Center ([info@sentinelssystem.org](mailto:info@sentinelssystem.org)) for questions and to provide comments/suggestions for future enhancements to this document. For more information on Sentinel's querying in the TriNetX platform, please refer to the Sentinel Website (<https://www.sentinelinitiative.org/methods-data-tools/methods/trinetx-rapid-querying>).

<sup>1</sup>The pregnant period is assumed to be 42 weeks total based on the maximum gestational age available in the ICD-10-CM diagnosis code set. For the cohorts that index on evidence of pregnancy, the number of weeks that occur pre-index and post-index is dependent on the weeks of gestation indicated by the index gestational age code, where X = 8-13 weeks for 1st trimester gestational age codes (starting at week 8 due to availability of ICD-10-CM diagnosis codes for gestational age) and Y = 14-42 weeks for 2nd/3rd trimester. The pre-index window is equal to the number of weeks gestation of the pregnancy-defining index code. The post-index window is equal to 42 minus the number of weeks gestation of the pregnancy-defining index code. For example, a code for 14 weeks gestation has a pre-index pregnant period of 14 weeks and a post-index pregnant period of 28 weeks.

<sup>2</sup>Pregnancy outcomes included live birth delivery, stillbirth, and spontaneous abortion. Live birth delivery codes were sourced from the MEPREP algorithm: Andrade, S. E., et al. (2012). "Medication Exposure in Pregnancy Risk Evaluation Program." *Matern Child Health J* 16(7):1349-1354.

### Glossary of Terms for Analyses Using TriNetX Live™ Platform\*

**Characteristic** - A medical fact (e.g., diagnosis, procedure, lab result) that occurred on or before the cohort-defining index event.

**Explore Cohort** - A description module on the TriNetX platform that presents a clinical profile of patients in a given cohort. Patient counts are rounded up to the nearest 10 before percentages are calculated, so the sum each of the values in one category may not total to 100%.

**Date Shifting** - A data obfuscation technique that some HCOs use to preserve patient privacy. Date shifting entails assigning each patient a random number of days (e.g., -365 to +365 days) and consistently adjusting each of their dates by that number of days, thus maintaining temporal relationships between records within a single patient.

**Fact** - (Medical Fact) A unit of utilization that represents a medical observation on a patient (e.g., diagnosis, procedure, clinical observation).

**Filter** - A method of limiting terms included in queries to a specific subset of data. Filters include age at time of event, data source (electronic health record or natural language processing); brand name, route, and strength for medication terms; occurrence (first or most recent) for lab terms; and priority for diagnosis and procedure terms.

**Group** - A series of codes and terms defined with Boolean logic that are used to create a query cohort. For each group, users have the ability to specified time periods of interest, and the number of instances that the group must occur for cohort entry.

**Subgroup** - Within a group, additional subgroups can be specified to define temporal relationships between the terms in the subgroup (e.g., terms in subgroup B must occur within 5 days after terms in subgroup A). Users can require that these temporal constraints be applied to the 1) first, 2) last, or 3) any instance of each subgroup.

**Health Care Organization (HCO)** - Organizations that contribute electronic healthcare record data to the TriNetX data networks. HCOs include academic institutions and community health provider systems and a single HCO may contain one or more individual sites or facilities.

**Index** - The first date when a patient meets all of the cohort-defining criteria. In Analytics modules, the index can be defined as the date when a patient meets all of the cohort criteria, or only one specific group's criteria.

**Module** - A subsection of the TriNetX platform that performs a distinct functionality. Cohorts are created using the Query Builder module. Descriptive modules include Healthcare Organizations, Explore Cohorts, Rate of Arrival, Summary Statistics, and Analyze Criteria. Advanced analytic modules include Analyze Outcomes, Compare Outcomes, Compare Cohorts, Treatment Pathways, and Incidence and Prevalence.

**Network** - An aggregation of HCOs contributing data to the platform. Multiple networks are available for querying on the platform; the different networks represent subsets of HCOs organized by date-shifting practices or availability of downloadable datasets.

**Outcome** - A medical fact (e.g., diagnosis, procedure, lab result) that occurred on or after the cohort-defining index event.

**Query** - In the TriNetX platform, a query is a distinct cohort with a unique set of terms and logic. Query cohorts are created using the Query Builder platform module.

**Risk** - In Advanced Analytics modules, risk refers to the percentage of patients in each cohort with the specified outcome of interest.

**Priority** - An indication whether the code was the condition that the provider spent the most time evaluating or treating during a visit. Possible values include primary, secondary, or unknown.

**Study Design:** In this retrospective cohort study, we identified counts of individuals with evidence of cannabis or a cannabis-derived product, other than cannabidiol or Epidiolex, and individuals with evidence of cannabidiol from NLP and no evidence of brand name Epidiolex, among a cohort of patients with a history of healthcare visits prior to exposure. This was done using the Query Builder module in the TriNetX Live™ platform. For these two main exposed cohorts of interest, we additionally summarized the length of individuals' patient record using the Summary Statistics module and each cohort's demographic distribution using the Explore Cohort module. We also utilized the Analyze Outcomes analytics module to determine the number of patients in the cohort with our baseline characteristics of interest, co-exposures, and subsequent cannabis-derived product exposures.

### Glossary of Terms for Analyses Using TriNetX Live™ Platform\*

**Term** - The codes used to specify patient cohort criteria in a query. Code options include diagnoses, procedures, medications, labs, demographics, genomics, and visits. Terms can be linked together using and/or Boolean logic. TriNetX also creates terms that group together multiple medical codes into single clinical concepts.

**Cannot Have Term** - A category of terms within a query group that patients must not have evidence of to be included in the cohort.

**Must Have Term** - A category of terms within a query group that patients must have evidence of to be included in the cohort.

**Time Constraint** - used to define time periods of interest for each group within a query. Time constraints can be defined relative to the date the query was run (e.g., any time before today), or defined based on specific dates (e.g., January 1, 2015 to September 30, 2020).

**Treatment Pathway** - In Advanced Analytics modules, the Treatment Pathways module returns the order in which patients received treatment and the prevalence of treatments, including combination of medications, following an index event.

**TriNetX Codes** - For commonly used laboratory terms, TriNetX aggregates Logical Observation Identifiers Names and Codes (LOINC) laboratory codes at a clinically significant level to new queryable TNX:LAB terms.

**Visit** - A type of term used to specify the type of medical encounter or facility where the encounter was recorded. Visit terms are derived by TriNetX from the source data. Visits are recorded separately from the codes or labs that occurred during the encounter; care settings are not attached to individual codes. Values for visit terms include: ambulatory, emergency, field, home health, inpatient encounter, inpatient acute, inpatient non-acute, laboratory, observation, pharmacy, pre-admission, short stay, virtual, and unknown.

\*all terms may not be used in this report

**Table 1. Baseline Characteristics Among Patients with Cannabis and Cannabis-Derived Product Exposures and a History of Healthcare Visits from July 1, 2018 through January 26, 2023**

	Cannabis and Cannabis-Derived Products, other than Cannabidiol/Epidiolex		Cannabidiol, excluding Epidiolex, identified from Natural Language Processing	
	Number	Percent/Standard Deviation <sup>1</sup>	Number	Percent/Standard Deviation <sup>1</sup>
Total Number of Patients	3,340	100%	23,610	100%
Baseline Clinical Characteristics [-365, 0] <sup>2</sup>	3,340	100%	22,830	100%
Alcohol-related disorders	110	3%	1,600	7%
Anxiety disorders	770	23%	7,500	33%

Dronabinol <sup>5</sup>	50	1%	600	3%
Nabilone	0	<1%	10	<1%
Opioids	710	21%	7,790	33%
Other immunosuppressants	60	2%	710	3%
<b>Post-index Subsequent Cannabis-Derived Product Exposures [1, 365]</b>	<b>3,340</b>	<b>100%</b>	<b>23,610</b>	<b>100%</b>
Any cannabis or cannabis-derived product (other than cannabidiol/Epidiolex)	1,380	41%	380	2%
Mean number of cannabis or cannabis-derived product (other than cannabidiol/Epidiolex) exposures	3.11	5.36	2.42	3.10
Positive tetrahydrocannabinol (THC) lab test	10	<1%	150	1%
Mean number of positive THC lab tests	1.29	0.76	1.20	0.71
Cannabidiol from natural language processing (NLP)	440	13%	10,700	45%
Cannabidiol from electronic health record (EHR)	20	1%	140	1%

<sup>1</sup>Value represents standard deviation where no % follows the value.

<sup>2</sup>Characteristics assessed in the pre-index period are taken from a convenience sample of the full cohort for the cannabidiol sourced from NLP cohort. Values in header rows represent the sample size for each look back period. Percentages for each section are calculated using these values as the denominator.

<sup>3</sup>Cancer baseline characteristic definition includes malignant, benign, and in situ neoplasms.

<sup>4</sup>Anticonvulsants includes ganaxolone, which was newly added to the TriNetX data and was not included previous queries.

<sup>5</sup>Dronabinol is a subset of the overall antiemetics category. Counts for dronabinol will be counted in both co-exposures.

NOTE: All counts provided through the TriNetX Live™ platform are rounded up to the nearest 10 to protect patient privacy. All percentages were calculated based on the rounded estimates, and are presented here as whole numbers to avoid mischaracterizing the precision of the measurement. Due to the rounding, all estimates should be interpreted as ranges, with the lower value of the range ≤ 0.3% less than the presented value unless otherwise noted.

**Table 2. Summary of Exposure During Pregnancy Among Patients with Cannabis and Cannabis-Derived Product Exposures from July 1, 2018 through January 26, 2023, by Pregnancy Definition**

	Cannabis and Cannabis-Derived Products, other than Cannabidiol/Epidiolex		Cannabidiol, excluding Epidiolex, identified from Natural Language Processing		Total Number of Pregnant Patients	
	Number	Percent	Number	Percent	Number	Percent
Any Ultrasound, Gestational Age, or Positive Pregnancy Test within 30 days of Exposure	730	<1%	220	<1%	2,057,950	100%
Exposure within Pregnancy, Identified with 1st Trimester Gestational Age Codes Only	30	<1%	20	<1%	144,560	100%
Exposure within Pregnancy Identified with 2nd or 3rd Trimester Gestational Age Codes Only	170	<1%	30	<1%	993,310	100%
Exposure within Pregnancy Identified with 1st and 2nd/3rd Trimester Gestational Age Codes	90	<1%	50	<1%	48,500	100%

NOTE: TriNetX obfuscates patient counts to safeguard protected health information (PHI), and percentages are calculated based on numerators and denominators rounded up to the nearest 10. Thus, all values in this table are actually ranges (i.e. 10 represents values from 1-10, 20 represents values 11-20, etc.), and the sum of each value in a category may not total to 100%.

Figure 1. Distribution of Length of Patient Record for Patients with Cannabis and Cannabis-Derived Product Exposures, other than Cannabidiol/Epidiolex, from July 1, 2018 through January 26, 2023

<b>Characteristic</b>	<b>ICD-10 Hierarchy Term/VA Code and Description</b>
Alcohol-Related disorders	F10 (alcohol-related disorders)
ADHD	F90 (Attention-deficit hyperactivity disorders)
Anxiety Disorders	F41 (Other anxiety disorders)
Autism	F84.0 (Autistic disorder)
Cancer	C00-D49 (Neoplasms)
Cannabis-Related Disorders	F12 (Cannabis related disorders)
Cerebrovascular diseases	I60-I69 (Cerebrovascular diseases)
Chronic Kidney Disease	N18 (Chronic kidney disease)
Chronic Liver Disease	K70-K77 (Diseases of liver)
Chronic Pain	
Back and Spine pain	M54 (Dorsalgia)
Fibromyalgia	M79.7 (Fibromyalgia)
Pain, not elsewhere classified (includes Chronic Pain Syndrome and Chronic Pain not elsewhere classified)	G89 (pain, not elsewhere classified)
Pain, unspecified	R52 (Pain, unspecified)
Chronic Respiratory Conditions	J40-J47 (Chronic lower respiratory diseases)
Dementia (vascular)	F01 (Vascular dementia)
Dementia (unspecified)	F03 (Unspecified dementia)
Diabetes	E08-E13 (Diabetes mellitus)
Dravet Syndrome	G40.83 (Dravet syndrome)
Dystonia	G24 (Dystonia)
Eating Disorders	F50 (Eating disorders)
Glaucoma	H40-H42 (Glaucoma)
HIV/AIDS	B20 (Human immunodeficiency virus [HIV] disease)
Huntington's Disease	G10 (Huntington's disease)
Hypertension	I10 (Essential (primary) hypertension)
Irritable Bowel Syndrome	K58 (Irritable bowel syndrome)
Ischemic Heart Diseases	I20-I25 (Ischemic heart diseases)
Lennox-Gastaut Syndrome	G40.81 (Lennox-Gastaut syndrome)
Mood Disorders	F30-F39 (Mood [affective] disorders)
Multiple Sclerosis	G35 (Multiple sclerosis)
Nicotine Use	F17 (Nicotine dependence)
Obesity	E66 (Overweight and obesity)
Opioid-related disorders	F11 (opioid-related disorders)
Other Epilepsies	G40.9 (Epilepsy, unspecified)
Other Neurological Or Developmental Conditions	F80-F89 (Pervasive and specific developmental disorders)
Parkinson's Disease	G20 (Parkinson's disease)
Personality Disorders	F60 (Specific personality disorders)
Post-Traumatic Stress Disorder	F43.1 (Post-traumatic stress disorder (PTSD))
Psychotic Disorders	F20-F29 (Schizophrenia, schizotypal, delusional, and other non-mood psychotic disorders)
Rheumatologic And Inflammatory Conditions	M05-M14 (Inflammatory polyarthropathies)
Sleep Disorders	G47 (Sleep disorders)

**Appendix B. List of International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) Hierarchy Codes and Veterans Affairs (VA) Formulary Classifications used to Define Baseline Characteristics in this Request**

<b>Characteristic</b>	<b>ICD-10 Hierarchy Term/VA Code and Description</b>
Spinal Cord Injury	S34 (Injury of lumbar and sacral spinal cord and nerves at abdomen, lower back and pelvis level)
Tourette Syndrome	F95.2 (Tourette's disorder)
Traumatic Brain Injury Or Intracranial Hemorrhage	S06 (Intracranial injury)
Tuberous Sclerosis Complex	Q85.1 (Tuberous sclerosis)
Vaping-Related Disorders	U07.0 (Vaping-related disorder)
Anticonvulsants	CN400 (Anticonvulsants)
Anticonvulsants, excluding cannabidiol	114477 (levetiracetam), 1356552 (perampanel), 1482502 (eslicarbazepine), 14851 (vigabatrin), 1739745 (brivaracetam), 2002 (carbamazepine), 2054968 (stiripentol), 21241 (clobazam), 2265690 (cenobamate), 24812 (felbamate), 25480 (gabapentin), 2604689 (ganaxolone), 28439 (lamotrigine), 31914 (tiagabine), 32624 (oxcarbazepine), 32894 (paramethadione), 33309 (phensuximide), 38404 (topiramide), 39998 (zonisamide), 40254 (valproate), 4135 (ethosuximide), 4328 (fenfluramine), 47858 (methsuximide), 623400 (lacosamide), 69036 (rufinamide), 72236 (fosphenytoin), 8183 (phenytoin), 8691 (primidone)
Anxiolytic And Hypnotic Drugs	CN300 (Sedatives/hypnotics)
Antidepressants	CN600 (Antidepressants)
Antipsychotics	CN700 (Antipsychotics)
Opioids	CN101 (Opioid analgesics)
Central Nervous System (CNS) Stimulants	CN800 (CNS stimulants)
Cardiovascular Medications	CV000 (Cardiovascular medications)
Antidiabetic Agents	HS500 (Blood glucose regulation agents)
Corticosteroids	HS050 (Adrenal corticosteroids)
Chemotherapeutics	AN000 (Antineoplastics)
Other Immunosuppressants	IM600 (Immune suppressants)
Antiemetic Agents	GA605 (Antiemetics)
Antihistamine	AH000 (Antihistamines)
Dronabinol	10402 (Dronabinol)
Nabilone	31447 (Nabilone)

<b>Cohort 9: Second/Third trimester gestation age + Cannabidiol user and no first trimester gestational age + No delivery before Cannabidiol</b>	
<b>Group n:</b>	<b>Time Restrictions</b>
<b>Subgroup 1A:</b>	
<i>Must Have:</i>	
Gestational age code for X (14-42) weeks	7/1/2018 - 1/26/2023
<b>And Subgroup 1B:</b>	
<i>Must Have:</i>	
Cannabidiol	[-X, 42-X] weeks from second/third trimester GA code
<i>Cannot Have:</i>	
Gestational age 8-13 weeks	
<b>Or</b>	
Cannabidiol [FILTER: Epidiolex brand]	
Cannabidiol [FILTER: 100 mg/ml strength]	
<b>OR Group n+1 (ETC):</b>	<b>Time Restrictions</b>
<b>Subgroup 2A:</b>	
<i>Must Have:</i>	
Gestational age code for X (14-42) weeks	7/1/2018 - 1/26/2023
<b>And Subgroup 2B:</b>	
<i>Must Have:</i>	
Cannabidiol	[-(X+1), 42-(X+1)] weeks from second/third trimester GA code
<i>Cannot Have:</i>	
Gestational age 8-13 weeks	
<b>Or</b>	
Cannabidiol [FILTER: Epidiolex brand]	
Cannabidiol [FILTER: 100 mg/ml strength]	
<b>AND Group n+n:</b>	<b>Time Restrictions</b>
<b>Subgroup 3A:</b>	
<i>Must Have:</i>	
Cannabidiol	7/1/2018 - 1/26/2023
<i>Cannot Have:</i>	
Cannabidiol [FILTER: Epidiolex brand]	
Cannabidiol [FILTER: 100 mg/ml strength]	
<b>And Subgroup 3B:</b>	
<i>Cannot Have:</i>	
Live birth delivery, stillbirth, or spontaneous abortion	[-90,0] days from any instance of CDP

**Appendix F. Specifications Defining Query Builder Modules in this Request**

<b>Cohort 10: First trimester gestational age + Cannabidiol user and second/third trimester gestational age + No delivery before Cannabidiol</b>	
<b>Group n:</b>	<b>Time Restrictions</b>
<b>Subgroup 1A:</b>	
<i>Must Have:</i>	
Gestational age 8-13 weeks	7/1/2018 - 1/26/2023
<b>And Subgroup 1B:</b>	
<i>Must Have:</i>	
Cannabidiol	[-X, 42-X] weeks from first trimester GA code
<b>And</b>	
Gestational age 14-42 weeks	
<i>Cannot Have:</i>	
Cannabidiol [FILTER: Epidiolex brand]	
Cannabidiol [FILTER: 100 mg/ml strength]	
<b>OR Group n+1 (ETC):</b>	<b>Time Restrictions</b>
<b>Subgroup 2A:</b>	
<i>Must Have:</i>	
Gestational age code for (X+1) (8-13) weeks	7/1/2018 - 1/26/2023
<b>And Subgroup 2B:</b>	
<i>Must Have:</i>	
Cannabidiol	[-(X+1), 42-(X+1)] weeks from first trimester GA code
<b>And</b>	
Gestational age 14-42 weeks	
<i>Cannot Have:</i>	
Cannabidiol [FILTER: Epidiolex brand]	
Cannabidiol [FILTER: 100 mg/ml strength]	
<b>AND Group n+n:</b>	<b>Time Restrictions</b>
<b>Subgroup 3A:</b>	
<i>Must Have:</i>	
Cannabidiol	7/1/2018 - 1/26/2023
<i>Cannot Have:</i>	
Cannabidiol [FILTER: Epidiolex brand]	
Cannabidiol [FILTER: 100 mg/ml strength]	
<b>And Subgroup 3B:</b>	
<i>Cannot Have:</i>	
Live birth delivery, stillbirth, or spontaneous abortion	[-90,0] days from any instance of CDP

**Appendix F. Specifications Defining Query Builder Modules in this Request**

<b>Cohort 11: Overall pregnancy cohort</b>	
<b>Group 1:</b>	<b>Time Restrictions</b>
<b>Subgroup 1A:</b>	
<i>Must Have:</i>	
All Pregnancy codes (ultrasound, gestational age, positive pregnancy test) 7/1/2018 - 1/26/2023	
<b>Cohort 12: First trimester gestation age and no second/third gestational age</b>	
<b>Group n:</b>	<b>Time Restrictions</b>
<b>Subgroup 1A:</b>	
<i>Must Have:</i>	
Gestational age code for X (8-13) weeks	7/1/2018 - 1/26/2023
<b>Subgroup 1B:</b>	
<i>Cannot Have:</i>	
Gestational age 14-42 weeks	[-X, 42-X] weeks from first trimester GA code
<b>OR Group n+1 (ETC):</b>	<b>Time Restrictions</b>
<b>Subgroup 2A:</b>	
<i>Must Have:</i>	
Gestational age code for (X+1) (8-13) weeks	7/1/2018 - 1/26/2023
<b>Subgroup 2B:</b>	
<i>Cannot Have:</i>	
Gestational age 14-42 weeks	[-(X+1), 42-(X+1)] weeks from first trimester GA code
<b>Cohort 13: Second/Third trimester gestation age + CDP user and no first trimester gestational age</b>	
<b>Group n:</b>	<b>Time Restrictions</b>
<b>Subgroup 1A:</b>	
<i>Must Have:</i>	
Gestational age code for X (14-42) weeks	7/1/2018 - 1/26/2023
<b>Subgroup 1B:</b>	
<i>Cannot Have:</i>	
Gestational age 8-13 weeks	[-X, 42-X] weeks from second/third trimester GA code
<b>OR Group n+1 (ETC):</b>	<b>Time Restrictions</b>
<b>Subgroup 2A:</b>	
<i>Must Have:</i>	
Gestational age code for X (14-42) weeks	7/1/2018 - 1/26/2023
<b>Subgroup 2B:</b>	
<i>Cannot Have:</i>	
Gestational age 8-13 weeks	[-(X+1), 42-(X+1)] weeks from second/third trimester GA code

**Appendix F. Specifications Defining Query Builder Modules in this Request**

<b>Cohort 14: First trimester gestational age + CDP user and second/third trimester gestational age</b>	
<b>Group n:</b>	<b>Time Restrictions</b>
<b>Subgroup 1A:</b>	
<i>Must Have:</i>	
Gestational age 8-13 weeks	7/1/2018 - 1/26/2023
<b>And Subgroup 1B:</b>	
<i>Must Have:</i>	
Gestational age 14-42 weeks	[-X, 42-X] weeks from first trimester GA code
<b>OR Group n+1 (ETC):</b>	<b>Time Restrictions</b>
<b>Subgroup 2A:</b>	
<i>Must Have:</i>	
Gestational age code for (X+1) (8-13) weeks	7/1/2018 - 1/26/2023
<b>And Subgroup 2B:</b>	
<i>Must Have:</i>	
Gestational age 14-42 weeks	[-(X+1), 42-(X+1)] weeks from first trimester GA code

**Appendix G. Specifications Defining Analytic Modules in this Request**

#	Module	Analysis Type	Cohort(s)	Window	Index Event(s)	Characteristics or Outcomes
1	Analyze Outcomes	Characteristics	Cohorts 1 and 2	[-365, 0]	All cohort-defining criteria	Baseline Clinical Characteristics (see Table Shell 1)
2	Analyze Outcomes	Characteristics	Cohorts 1 and 2	[-30, 0]	All cohort-defining criteria	Co-Exposures (see Table Shell 1)
3	Analyze Outcomes	Risk	Cohorts 1 and 2	[1,30]	All cohort-defining criteria	Co-exposures (see Table Shell 1)
4	Analyze Outcomes	Risk/Number of instances	Cohorts 1 and 2	[1,365]	All cohort-defining criteria	Subsequent index-defining exposure (cannabidiol, positive tetrahydrocannabinol (THC) test, cannabis or other CDP being captured)
