

## Disclaimer

The following report(s) provides findings from an FDA-initiated query using Sentinel. While Sentinel queries may be undertaken to assess potential medical product safety risks, they may also be initiated for various other reasons. Some examples include determining a rate or count of an identified health outcome of interest, examining medical product use, exploring the feasibility of future, more detailed analyses within Sentinel, and seeking to better understand Sentinel capabilities.

Data obtained through Sentinel are intended to complement other types of evidence such as preclinical studies, clinical trials, postmarket studies, and adverse event reports, all of which are used by FDA to inform regulatory decisions regarding medical product safety. The information contained in this report is provided as part of FDA's commitment to place knowledge acquired from Sentinel in the public domain as soon as possible. Any public health actions taken by FDA regarding products involved in Sentinel queries will continue to be communicated through existing channels.

FDA wants to emphasize that the fact that FDA has initiated a query involving a medical product and is reporting findings related to that query does not mean that FDA is suggesting health care practitioners should change their prescribing practices for the medical product or that patients taking the medical product should stop using it. Patients who have questions about the use of an identified medical product should contact their health care practitioners.

The following report contains a description of the request, request specifications, and results from the modular program run(s).

#### Overview for Request: cder\_mpl1r\_wp226

Request ID: cder\_mpl1r\_wp226\_grp1\_v01 and cder\_mpl1r\_wp226\_grp2\_v01

<u>Request Description</u>: This analysis is a part of the ongoing effort to monitor the utilization of outpatient COVID-19 treatment under emergency use authorization (EUA). In this report we estimated the rates of outpatient COVID-19 treatment utilization and assessed the baseline characteristics of outpatient COVID-19 treatment users in the Sentinel Distributed Database (SDD) and the Rapid COVID SDD.

#### Sentinel Routine Querying Module: Cohort Identification and Descriptive Analysis (CIDA) module, version 11.3.0

**Data Source:** We distributed one request to three Data Partners on July 1, 2022. These three Data Partners are a subset of the Rapid COVID SDD and include Data Partners with care setting information for laboratory data. We distributed a second request to two Data Partners without care setting information for laboratory data. One of the two Data Partners is a subset of the SDD, while the other is a subset of the Rapid COVID SDD. The study period included data from December 22, 2021 up to April 30, 2022. Please see Appendix A for a list of dates of available data for each Data Partner.

<u>Study Design</u>: We identified individuals with use of outpatient COVID-19 treatment, including Paxlovid (nirmatrelvir/ritonavir), a co-packaged oral drug product consisting of nirmatrelvir and ritonavir, sotrovimab, bebtelovimab, molnupiravir, outpatient remdesivir, bamlanivimab, casirivimab and imdevimab, and bamlanivimab and etesevimab. We further stratified results by age group, Health and Human Services (HHS) region, and year-month. Please see Appendix B for a list of states and terrtories included in each HHS region. This is a Type 1 analysis in the Query Request Package (QRP) documentation.

Exposures/Events of Interest: The exposures of interest were: 1) nirmatrelvir/ritonavir, 2) sotrovimab, 3) bebtelovimab, 4) molnupiravir, 5) remdesivir, 6) casirivimab and imdevimab, and 7) bamlanivimab and etesevimab. We identified COVID-19 treatment using Healthcare Common Procedure Coding System (HCPCS), International Classification of Diseases, Tenth Revision, Procedure Coding System (ICD-10-PCS) procedure codes, and National Drug Codes (NDCs). For outpatient exposure to remdesivir, we identified treatment using HCPCS and ICD-10-PCS codes, outpatient dispensing data, and NDCs in the Procedure and Dispensing Sentinel Common Data Model (SCDM) tables, in either the ambulatory (AV), other ambulatory (OA), or emergency department (ED) care settings. As casirivimab and imdevimab are not authorized currently to be used as individual products, we treated evidence of either one of those drugs as joint casirivimab and imdevimab exposure. For bamlanivimab and etesevimab, we required evidence of both drugs on the same day to count as joint bamlanivimab and etesevimab exposure. Please see Appendix C for a list of procedure codes and Appendix D for a list of generic and brand names of medical products used to define exposures in this request. Only the first qualifying (index) COVID-19 treatment exposure qualified for the cohort; cohort re-entry was not allowed.

Cohort Eligibility Criteria: We required members to be continuously enrolled in health plans for at least 183 days prior to their index exposure. Patients in the nirmatrelvir/ritonavir and molnupiravir cohorts were required to have medical and drug coverage, while the other cohorts were only required to have medical coverage. A gap in enrollment of up to 45 days was allowed and treated as continuous enrollment. The following age groups were defined: 0-11, 12-17, 18-24, 25-34, 35-44, 45-54, 55-64, 65-74, 75-84, and 85+ years.

#### Overview for Request: cder\_mpl1r\_wp226

**Baseline Characteristics:** We assessed the following characteristics in the 183 days prior to and including the index date: inpatient, outpatient, or emergency department encounter, COVID-19 positive lab, COVID-19 diagnosis, obesity, pregnancy, chronic kidney disease, diabetes, immunosuppressant disease or treatment, cardiovascular disease (including congenital heart disease (CHD)), interstitial lung disease, chronic obstructive pulmonary disease (COPD), pulmonary hypertension or pulmonary embolism, dementia, sickle cell disease, bronchiectasis, cancer, cerebrovascular disease, congenital heart disease, chronic liver disease (cirrhosis, non-alcoholic fatty liver disease, alcoholic liver disease, autoimmune hepatitis), cystic fibrosis, human immunodeficiency virus (HIV), mental health conditions (such as mood disorders, including depression, and schizophrenia spectrum disorders), smoking, current and former, solid organ or blood stem cell transplantation, tuberculosis, overweight, substance use disorders, thalassemia, alpha 1 antitrypsin deficiency, reactive airway and other respiratory diseases, asthma, hepatitis B, hepatitis C, and hypertension. Age, year, sex, race, and ethnicity were assessed on the index date. We assessed the exposure to potent and non-potent Cytochrome P450, family 3, subfamily A (CYP3A) inducers, drugs dependent on CYP3A for clearance, and other CYP3A drug-drug interactors, all in the 90, 30, and seven days prior to index. We also assessed use of any of the index COVID-19 treatment in the two weeks prior, 15 to 30 days prior, two weeks after, and 15 to 30 days after the index exposure.

Please see Appendix E for a list of ICD-10-CM diagnosis codes, ICD-10-PCS, HCPCS, CPT-4, and Logical Observation Identifiers Names and Codes (LOINC) laboratory codes and Appendix F for a list of generic names of medical products used to define the baseline characteristics in this request.

Please see Appendices G-I for the specifications defining parameters used in this request.

<u>Limitations</u>: Algorithms used to define exposures, inclusion criteria, and baseline characteristics use codes in healthcare administrative data as proxies for events; thus, misclassification is possible.

Claims might not be complete for the overall study population by the time the analysis was done. data completeness varies by data source and claims type (i.e. care setting: inpatient or outpatient); we expect inpatient claims may not be complete for  $\ge 60$  days after the encounters (i.e.,  $\ge 60$  days for the two participating national health plans,  $\ge 30$  days for the two participating integrated delivery systems). Therefore, estimates utilizing inpatient claims (e.g., covariates, or events) may be underestimated. Data should be interpreted with these limitations in mind.

Comorbidities can be under-captured as health care utilization for non-urgent medical conditions may reduce during the pandemic.

### Glossary of Terms for Analyses Using Cohort Identification and Descriptive Analysis (CIDA) Module\*

Amount Supplied - number of units (pills, tablets, vials) dispensed. Net amount per NDC per dispensing. Blackout Period - number of days at the beginning of a treatment episode that events are to be ignored. If an event occurs during the blackout period, the episode is excluded.

**Care Setting** - type of medical encounter or facility where the exposure, event, or condition code was recorded. Possible care settings include: Inpatient Hospital Stay (IP), Non-Acute Institutional Stay (IS), Emergency Department (ED), Ambulatory Visit (AV), and Other Ambulatory Visit (OA). For laboratory results, possible care settings include: Emergency Department (E), Home (H), Inpatient (I), Outpatient (O), or Unknown or Missing (U). The Care Setting, along with the Principal Diagnosis Indicator (PDX), forms the Care Setting/PDX parameter.

**Ambulatory Visit (AV)** - includes visits at outpatient clinics, same-day surgeries, urgent care visits, and other same-day ambulatory hospital encounters, but excludes emergency department encounters.

**Emergency Department (ED)** - includes ED encounters that become inpatient stays (in which case inpatient stays would be a separate encounter). Excludes urgent care visits.

**Inpatient Hospital Stay (IP)** - includes all inpatient stays, same-day hospital discharges, hospital transfers, and acute hospital care where the discharge is after the admission date.

**Non-Acute Institutional Stay (IS)** - includes hospice, skilled nursing facility (SNF), rehab center, nursing home, residential, overnight non-hospital dialysis and other non-hospital stays.

**Other Ambulatory Visit (OA)** - includes other non overnight AV encounters such as hospice visits, home health visits, skilled nursing facility visits, other non-hospital visits, as well as telemedicine, telephone and email consultations.

**Charlson/Elixhauser Combined Comorbidity Score** - calculated based on comorbidities observed during a requester-defined window around the exposure episode start date (e.g., in the 183 days prior to index).

**Code Days** - the minimum number of times the diagnosis must be found during the evaluation period in order to fulfill the algorithm to identify the corresponding patient characteristic.

**Cohort Definition (drug/exposure)** - indicates how the cohort will be defined: 01: Cohort includes only the first valid treatment episode during the query period; 02: Cohort includes all valid treatment episodes during the query period; 03: Cohort includes all valid treatment episodes during the query period; 03: Cohort includes all valid treatment episodes during the query period; 04: Cohort includes all valid treatment episodes during the query period; 04: Cohort includes all valid treatment episodes during the query period; 05: Cohort includes all valid treatment episodes during the query period; 05: Cohort includes all valid treatment episodes during the query period; 05: Cohort includes all valid treatment episodes during the query period; 05: Cohort includes all valid treatment episodes during the query period; 05: Cohort includes all valid treatment episodes during the query period; 05: Cohort includes all valid treatment episodes during the query period; 05: Cohort includes all valid treatment episodes during the query period; 05: Cohort includes all valid treatment episodes during the query period; 06: Cohort includes all valid treatment episodes during the query period; 06: Cohort includes all valid treatment episodes during the query period; 06: Cohort includes all valid treatment episodes during the query period; 06: Cohort includes all valid treatment episodes during the query period; 07: Cohort includes all valid treatment episodes during the query period; 07: Cohort includes all valid treatment episodes during the query period; 07: Cohort includes all valid treatment episodes during the query period; 08: Cohort includes all valid treatment episodes during the query period; 08: Cohort includes all valid treatment episodes during the query period; 08: Cohort includes all valid treatment episodes during the query period; 08: Cohort includes all valid treatment episodes during the query period; 08: Cohort includes all valid treatment episodes during the query period; 08: Cohort includes during the q

**Computed Start Marketing Date** - represents the first observed dispensing date among all valid users within a GROUP (scenario) within each Data Partner site.

Days Supplied - number of days supplied for all dispensings in qualifying treatment episodes.

**Eligible Members** - number of members eligible for an incident treatment episode (defined by the drug/exposure and event washout periods) with drug and medical coverage during the query period.

**Enrollment Gap** - number of days allowed between two consecutive enrollment periods without breaking a "continuously enrolled" sequence.

**Episodes** - treatment episodes; length of episode is determined by days supplied in one dispensing or consecutive dispensings bridged by the episode gap.

**Episode Gap** - number of days allowed between two (or more) consecutive exposures (dispensings/procedures) to be considered the same treatment episode.

**Event Deduplication** - specifies how events are counted by the Modular Program (MP) algorithm: 0: Counts all occurrences of a health outcome of interest (HOI) during an exposure episode; 1: de-duplicates occurrences of the same HOI code and code type on the same day; 2: de-duplicates occurrences of the same HOI group on the same day (e.g., de-duplicates at the group level).

Exposure Episode Length - number of days after exposure initiation that is considered "exposed time."

**Exposure Extension Period** - number of days post treatment period in which the outcomes/events are counted for a treatment episode. Extensions are added after any episode gaps have been bridged.

**Lookback Period** - number of days wherein a member is required to have evidence of pre-existing condition (diagnosis/procedure/drug dispensing).

**Maximum Episode Duration** - truncates exposure episodes after a requester-specified number of exposed days. Applied after any gaps are bridged and extension days added to the length of the exposure episode.

**Member-Years** - sum of all days of enrollment with medical and drug coverage in the query period preceded by an exposure washout period all divided by 365.25.

**Minimum Days Supplied** - specifies a minimum number of days in length of the days supplied for the episode to be considered. **Minimum Episode Duration** - specifies a minimum number of days in length of the episode for it to be considered. Applied after any gaps are bridged and extension days added to the length of the exposure episode.

**Monitoring Period** - used to define time periods of interest for both sequential analysis and simple cohort characterization requests. **Principal Diagnosis (PDX)** - diagnosis or condition established to be chiefly responsible for admission of the patient to the hospital. 'P' = principal diagnosis, 'S' = secondary diagnosis, 'X' = unspecified diagnosis, '.' = blank. Along with the Care Setting values, forms the Caresetting/PDX parameter.

Query Period - period in which the modular program looks for exposures and outcomes of interest.

**Switch Evaluation Step Value** - value used to differentiate evaluation step. Each switch pattern can support up to 2 evaluation steps (0 = switch pattern evaluation start; 1 = first evaluation; 2 = second evaluation).

Switch Gap Inclusion Indicator - indicator for whether gaps in treatment episodes that are included in a switch episode will be counted as part of the switch episode duration.

**Switch Pattern Cohort Inclusion Date** - indicates which date to use for inclusion into the switch pattern cohort of interest as well as optionally as the index date of the treatment episode initiating the switch pattern. Valid options are the product approval date, product marketing date, other requester defined date, or computed start marketing date.

**Switch Pattern Cohort Inclusion Strategy** - indicates how the switch pattern cohort inclusion date will be used: 01: used only as a switch cohort entry date. First treatment episode dispensing date is used as index for computing time to first switch; 02: used as switch cohort entry date and as initial switch step index date for computing time to first switch.

**Treatment Episode Truncation Indicator** - indicates whether the exposure episode will be truncated at the occurrence of a requesterspecified code.

**Washout Period (drug/exposure)** - number of days a user is required to have no evidence of prior exposure (drug dispensing/procedure) and continuous drug and medical coverage prior to an incident treatment episode.

**Washout Period (event/outcome)** - number of days a user is required to have no evidence of a prior event (procedure/diagnosis) and continuous drug and medical coverage prior to an incident treatment episode.

Years at Risk - number of days supplied plus any episode gaps and exposure extension periods all divided by 365.25.

<sup>1</sup>Race data may not be completely populated at all Data Partners; therefore, data about race may be incomplete.

<sup>2</sup>The Sentinel Common Data Model does not require outpatient dispensings to have a corresponding record in the Encounter table, therefore patient counts by encounter care setting may not sum to the total number of patients in the cohort.
